| 0 Point*       | A zero-point response is incorrect, irrelevant, incoherent, or contains a correct solution obtained using an obviously incorrect procedure. Although some elements may contain correct mathematical procedures, holistically they are not sufficient to demonstrate even a limited understanding of the mathematical concepts embodied in the task. |

*Condition Code A is applied whenever a student who is present for a test session leaves an entire constructed-response question in that session completely blank (no response attempted).
# 3-Point Holistic Rubric

<table>
<thead>
<tr>
<th>Score Points</th>
<th>Description</th>
</tr>
</thead>
</table>
| **3 Point**  | A three-point response includes the correct solution(s) to the question and demonstrates a thorough understanding of the mathematical concepts and/or procedures in the task.  

This response  

- indicates that the student has completed the task correctly, using mathematically sound procedures  
- contains sufficient work to demonstrate a thorough understanding of the mathematical concepts and/or procedures  
- may contain inconsequential errors that do not detract from the correct solution(s) and the demonstration of a thorough understanding |
| **2 Point**  | A two-point response demonstrates a partial understanding of the mathematical concepts and/or procedures in the task.  

This response  

- appropriately addresses most, but not all aspects of the task using mathematically sound procedures  
- may contain an incorrect solution but provides sound procedures, reasoning, and/or explanations  
- may reflect some minor misunderstanding of the underlying mathematical concepts and/or procedures |
| **1 Point**  | A one-point response demonstrates only a limited understanding of the mathematical concepts and/or procedures in the task.  

This response  

- may address some elements of the task correctly but reaches an inadequate solution and/or provides reasoning that is faulty or incomplete  
- exhibits multiple flaws related to misunderstanding of important aspects of the task, misuse of mathematical procedures, or faulty mathematical reasoning  
- reflects a lack of essential understanding of the underlying mathematical concepts  
- may contain the correct solution(s) but required work is limited |
| **0 Point**  | A zero-point response is incorrect, irrelevant, incoherent, or contains a correct solution obtained using an obviously incorrect procedure. Although some elements may contain correct mathematical procedures, holistically they are not sufficient to demonstrate even a limited understanding of the mathematical concepts embodied in the task. |

*Condition Code A is applied whenever a student who is present for a test session leaves an entire constructed-response question in that session completely blank (no response attempted).
2016 2-and 3-Point Mathematics Scoring Policies

Below are the policies to be followed while scoring the mathematics tests for all grades:

1. If a student does the work in other than a designated “Show your work” area, that work should still be scored. (Additional paper is an allowable accommodation for a student with disabilities if indicated on the student’s Individual Education Program or Section 504 Accommodation Plan.)

2. If the question requires students to show their work, and the student shows appropriate work and clearly identifies a correct answer but fails to write that answer in the answer blank, the student should still receive full credit.

3. In questions that provide ruled lines for students to write an explanation of their work, mathematical work shown elsewhere on the page should be considered and scored.

4. If the student provides one legible response (and one response only), teachers should score the response, even if it has been crossed out.

5. If the student has written more than one response but has crossed some out, teachers should score only the response that has not been crossed out.

6. Trial-and-error responses are not subject to Scoring Policy #5 above, since crossing out is part of the trial-and-error process.

7. If a response shows repeated occurrences of the same conceptual error within a question, the student should not be penalized more than once.

8. In questions that require students to provide bar graphs,
   - in Grades 3 and 4 only, touching bars are acceptable
   - in Grades 3 and 4 only, space between bars does not need to be uniform
   - in all grades, widths of the bars must be consistent
   - in all grades, bars must be aligned with their labels
   - in all grades, scales must begin at 0, but the 0 does not need to be written

9. In questions requiring number sentences, the number sentences must be written horizontally.

10. In pictographs, the student is permitted to use a symbol other than the one in the key, provided that the symbol is used consistently in the pictograph; the student does not need to change the symbol in the key. The student may not, however, use multiple symbols within the chart, nor may the student change the value of the symbol in the key.

11. If students are not directed to show work, any work shown will not be scored. This applies to items that do not ask for any work and items that ask for work for one part and do not ask for work in another part.

12. Condition Code A is applied whenever a student who is present for a test session leaves an entire constructed-response question in that session completely blank (no response attempted). This is not to be confused with a score of zero wherein the student does respond to part or all of the question but that work results in a score of zero.
Rearrange the numbers below so that they are listed in numerical order from least to greatest.

34.039  32.94  34.198  32.102  33.6

**Answer**

<table>
<thead>
<tr>
<th></th>
<th>Least</th>
<th>Greatest</th>
</tr>
</thead>
</table>

The number 33.01 is added to the list so that the new list is still in numerical order. Between which two numbers should 33.01 be placed?

**Answer** Between _________ and _________
**EXEMPLARY RESPONSE**

Rearrange the numbers below so that they are listed in numerical order from least to greatest.

<table>
<thead>
<tr>
<th></th>
<th>34.039</th>
<th>32.94</th>
<th>34.198</th>
<th>32.102</th>
<th>33.6</th>

**Answer**

<table>
<thead>
<tr>
<th></th>
<th><strong>32.102</strong></th>
<th><strong>32.94</strong></th>
<th><strong>33.6</strong></th>
<th><strong>34.039</strong></th>
<th><strong>34.198</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Least</td>
<td>Greatest</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The number 33.01 is added to the list so that the new list is still in numerical order. Between which two numbers should 33.01 be placed?

**Answer** Between **32.94** and **33.6**

OR other valid response
Rearrange the decimals below so that they are listed in numerical order from least to greatest.

34.039 32.94 34.198 32.102 33.6

Answer 32.102, 32.94, 33.6, 34.039, 34.198

The number 33.01 is added to the list so that the new list is still in numerical order. Between which two numbers should 33.01 be placed?

Answer Between 32.94 and 33.6

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The given values are correctly ordered from least to greatest and 33.01 is placed between the correct two numbers.
Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The given values are correctly ordered from least to greatest and 33.01 is placed between the correct two numbers.
Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The given values are correctly ordered from least to greatest and 33.01 is placed between the correct two numbers.
GUIDE PAPER 4

Rearrange the decimals below so that they are listed in numerical order from least to greatest.

34.039 32.02 32.102 33.01 35.039 34.198

Answer 33.0 32.94 32.102 34.039 34.198

Least Greatest

The number 33.01 is added to the list so that the new list is still in numerical order. Between which two numbers should 33.01 be placed?

Answer Between 33.0 32.94

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. 33.01 is placed between the correct two numbers; however, the given values are not correctly ordered from least to greatest (33.6 and 32.102 are transposed).
GUIDE PAPER 5

Rearrange the decimals below so that they are listed in numerical order from least to greatest.

\[ 34.009, 32.04, 32.199, 32.102, 32.06 \]

Answer

Least \[ 32.04 \] \[ 32.06 \] \[ 33.6 \] \[ 34.06 \] \[ 34.199 \] Greatest

The number 33.01 is added to the list so that the new list is still in numerical order. Between which two numbers should 33.01 be placed?

Answer Between \[ 32.94 \] and \[ 33.6 \]

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. 33.01 is placed between the correct two numbers; however, the given values are not correctly ordered from least to greatest (32.94 and 32.102 are transposed).
Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The value of 33.01 does fall between 32.102 and 33.6; however, the given values are not correctly ordered from least to greatest (32.94 and 32.102 are transposed). Note that, although one of the values expected in the second part of the response is 32.94 and not 32.102 as written, this error is a direct result from the previous incorrect ordering of the given list. As per Scoring Policy #7, the student should not be penalized more than once for the same error.
Score Point 0 (out of 2 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The given values are not correctly ordered from least to greatest (33.6 and 32.102 are transposed) and although the value of 33.01 does fall between 30.00 and 35.01, those values are not drawn from those given in the prompt.
Score Point 0 (out of 2 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The given values are not correctly ordered from least to greatest (32.94 and 32.102 are transposed) and the value of 33.01 does not fall between 32.94 and 32.102.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of $\frac{1}{8}$ cubic foot. In total, how many wooden cubes will fit in the box?

*Show your work.*

**Answer** ______________ wooden cubes
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of \( \frac{1}{8} \) cubic foot. In total, how many wooden cubes will fit in the box?

*Show your work.*

\[
5 \text{ ft} \times 3 \text{ ft} \times 2 \text{ ft} = 30 \text{ cubic feet}
\]

\[
30 \div \frac{1}{8} = 30 \times 8 = 240 \text{ cubes}
\]

OR other valid response

Answer \( \underline{240} \) wooden cubes
This response demonstrates a thorough understanding of the mathematical concepts in the task. All multiplication and division is carried out appropriately and correctly to arrive at a correct solution.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of $\frac{1}{8}$ cubic foot. In total, how many wooden cubes will fit in the box?

Show your work.

$$5 \times 3 = 15 \times 2 = 30 \div \frac{1}{8} = \frac{30 \times \frac{8}{1}}{1} = 240$$

Answer: 240 wooden cubes

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. All multiplication and division is carried out appropriately and correctly to arrive at a correct solution.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of $\frac{1}{8}$ cubic foot. In total, how many wooden cubes will fit in the box?

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. A visual representation of partial products is employed appropriately to arrive at a correct solution.

Answer 240 wooden cubes
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of $\frac{1}{8}$ cubic foot. In total, how many wooden cubes will fit in the box?

**Show your work.**

$$V = l \times w \times h$$

$$V = 5 \times 3 \times 2$$

$$V = 15 \times 2$$

$$V = 30$$

$$\frac{15}{30}$$

$$\times \frac{2}{2}$$

$$\frac{1}{8} \times \frac{1}{30} = \frac{1}{240}$$

$$30 \times \frac{1}{8} \times \frac{1}{30} = \frac{1}{240}$$

Answer: 240 wooden cubes

---

**Score Point 1 (out of 2 points)**

This response demonstrates only a partial understanding of the mathematical concepts in the task. The correct total volume is found; however, it is then inappropriately multiplied as $\frac{1}{8} \times \frac{1}{30}$ rather than correctly dividing $30 \div \frac{1}{8}$, resulting in the reciprocal of the correct answer. The response correctly addresses only some elements of the task.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of \( \frac{1}{8} \) cubic foot. In total, how many wooden cubes will fit in the box?

\[
\text{Show your work. } \quad 5 \times 3 \times 2 = 30 = 3 \frac{6 - 2 \cdot 3}{8} = 3 \frac{3}{4}
\]

Answer \( 3 \frac{3}{4} \) wooden cubes

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The correct total volume is found; however, it is then inappropriately multiplied by \( \frac{1}{8} \) instead of dividing by \( \frac{1}{8} \). The response correctly addresses only some elements of the task.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of $\frac{1}{8}$ cubic foot. In total, how many wooden cubes will fit in the box?

Show your work.

$$V = l \times w \times h$$

$$V = 5 \text{ ft} \times 3 \text{ ft} \times 2 \text{ ft}$$

$$V = 15 \text{ ft}^3 \times 2$$

$$V = 30 \text{ ft}^3$$

Answer $30 \text{ ft}^3$ wooden cubes

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The correct total volume is found; however, no attempt is made to solve how many wooden cubes will fit in that volume. The response correctly addresses only some elements of the task.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of $\frac{1}{8}$ cubic foot. In total, how many wooden cubes will fit in the box?

Show your work.

$5 \times \frac{1}{8} = \frac{5}{8}$

$3 \times \frac{1}{8} = \frac{3}{8}$

$2 \times \frac{1}{8} = \frac{2}{8}$

Answer $\frac{1}{2}$ wooden cubes

Score Point 0 (out of 2 points)

This response is irrelevant and does not demonstrate even a limited understanding of the mathematical concepts in the task. No attempt is made to determine the total volume of the package and $\frac{1}{8}$ is inappropriately multiplied by the individual sides of the package.
A toy company uses the box shown below to package wooden cubes.

Each wooden cube has a volume of \( \frac{1}{8} \) cubic foot. In total, how many wooden cubes will fit in the box?

**Show your work.**

Answer \( 10 \text{ ft} \) wooden cubes

**Score Point 0 (out of 2 points)**

This response is irrelevant and does not demonstrate even a limited understanding of the mathematical concepts in the task. No attempt is made to determine the total volume of the package and the individual sides of the package are inappropriately added together.
A library had 6,422 music CDs stored on 26 shelves. If the same number of CDs were stored on each shelf, how many CDs were stored on each shelf?

*Show your work.*

**Answer** _______________ CDs
EXEMPLARY RESPONSE

A library had 6,422 music CDs stored on 26 shelves. If the same number of CDs were stored on each shelf, how many CDs were stored on each shelf?

Show your work.

\[
6422 \div 26 = 247
\]

\[
\begin{array}{c}
247 \\
26) 6422 \\
-52 \\
122 \\
-104 \\

0
\end{array}
\]

Answer: 246 CDs

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The number of CDs is appropriately divided by the number of shelves; however, a calculation error results in an incorrect solution.
GUIDE PAPER 6

A library had 5,422 music CDs stored on 26 shelves. If the same number of CDs were stored on each shelf, how many CDs were stored on each shelf?

*Show your work.*

\[
\begin{align*}
5422 \div 26 &= \frac{2547}{26} \\
26 & \div 52 \underline{\downarrow}
\end{align*}
\]

\[
\begin{align*}
10x &= \underline{104} \\
-182 & \underline{182} \\
-182 & \underline{0}
\end{align*}
\]

*Answer* 207 CDs

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The number of CDs is appropriately divided by the number of shelves; however, a calculation error results in an incorrect solution.
A library had 6,422 music CDs stored on 26 shelves. If the same number of CDs were stored on each shelf, how many CDs were stored on each shelf?

Show your work.

\[
\begin{align*}
6,422 & \\
+ 26 & \\
\hline
6,448 &
\end{align*}
\]

Answer: 6,448 CDs

Score Point 0 (out of 2 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The number of CDs is inappropriately added to the number of shelves.
A library had 6,422 music CDs stored on 26 shelves. If the same number of CDs were stored on each shelf, how many CDs were stored on each shelf?

Show your work.

Answer: 243 CDs

Score Point 0 (out of 2 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The number of CDs is inappropriately multiplied with the number of shelves.
Describe the relationship between \( n \) and 4 that will make the value of the expression \( 7 \times \frac{n}{4} \) greater than 7.

**Answer**

Describe the relationship between \( a \) and \( b \) that will make the value of the expression \( 7 \times \frac{a}{b} \) equal to 7.

**Answer**
EXEMPLARY RESPONSE

Describe the relationship between \( n \) and 4 that will make the value of the expression \( 7 \times \frac{n}{4} \) greater than 7.

**Answer**

\( n \) must be greater than four, in order for the fraction to be greater than one.

Seven must be multiplied by a number greater then one so that the answer is larger than itself.

Or other valid explanation

---

Describe the relationship between \( a \) and \( b \) that will make the value of the expression \( 7 \times \frac{a}{b} \) equal to 7.

**Answer**

\( a \) and \( b \) must be equal, so that the fraction equals one. When seven is multiplied by one it will equal the answer seven.

Or other valid explanation
Describe the relationship between $n$ and 4 that will make the value of the expression $7 \times \frac{n}{4}$ greater than 7.

**Answer**

When the numerator is greater than the denominator the answer will be greater than 7 ($n > 4$).

Describe the relationship between $a$ and $b$ that will make the value of the expression $7 \times \frac{a}{b}$ equal to 7.

**Answer**

For the answer to be equal to 7 the numerator and denominator have to be the same so they cancel out to 1. And any number multiplied by 1 will be that number.

**Score Point 2 (out of 2 points)**

This response demonstrates a thorough understanding of the mathematical concepts in the task. The relationship between numerator and denominator required for the given conditions is correctly described for both expressions.
GUIDE PAPER 2

Describe the relationship between $n$ and 4 that will make the value of the expression $7 \times \frac{n}{4}$ greater than 7.

Answer

Relationship between $N$ and 4
is $N$ is greater than 4.

Describe the relationship between $a$ and $b$ that will make the value of the expression $7 \times \frac{a}{b}$ equal to 7.

Answer

Relationship here is $b$ and $A$
are supposed to be the same.

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The relationship between numerator and denominator required for the given conditions is correctly described for both expressions.
GUIDE PAPER 3

Describe the relationship between \( n \) and 4 that will make the value of the expression \( 2 \times \frac{n}{4} \) greater than 7.

Answer

The \( n \) has to be greater than 4.

Describe the relationship between \( a \) and \( b \) that will make the value of the expression \( 7 \times \frac{a}{b} \) equal to 7.

\[
\frac{7}{1} \times \left( \frac{1}{1} \right) = \frac{7}{1} = 7 \quad 7 \times \left( \frac{4}{4} \right)
\]

Answer

\( a \) and \( b \) have to be the same number.

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The relationship between numerator and denominator required for the given conditions is correctly described for both expressions.
GUIDE PAPER 4

Describe the relationship between $n$ and 4 that will make the value of the expression $7 \times \frac{n}{4}$ greater than 7.

**Answer**

The relationship between $n$ and 4 is that $n$ is greater than 4.

Describe the relationship between $a$ and $b$ that will make the value of the expression $7 \times \frac{a}{b}$ equal to 7.

**Answer**

The relationship between $a$ and $b$ is that $b$ is greater than $a$.

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The relationship between $n$ and 4 is correctly described; however, the relationship between $a$ and $b$ is incorrect.
GUIDE PAPER 5

Describe the relationship between $n$ and 4 that will make the value of the expression $7 \times \frac{n}{4}$ greater than 7.

\[ 7 \times \frac{n}{4} \] (1) = 7

**Answer**

If you do $n = ?$ then you have to do the $\times$ and figure out what fits to make the answer correct. The correct answer is: $n = 4$.

\[ 7 \times \frac{4}{4} \] is really $7 \times 1$ and $7 \times 1 = 7$.

Describe the relationship between $a$ and $b$ that will make the value of the expression $7 \times \frac{2}{b}$ equal to 7.

**Answer**

$a$ and $b = 4$, because $\frac{4}{4}$ is 1 and $7 \times 1$ is equal to 7.

You didn't even have to do 4, you could of done any # as long as it was the same!

**Score Point 1 (out of 2 points)**

This response demonstrates only a partial understanding of the mathematical concepts in the task. The relationship between $a$ and $b$ being equal is correctly described; however, the relationship between $n$ and 4 is incorrect.
Describe the relationship between $n$ and 4 that will make the value of the expression $7 \times \frac{n}{4}$ greater than 7.

**Answer**

The $n$ would be a 3, which $7 \times \frac{3}{4}$ would be greater than 7.

Describe the relationship between $a$ and $b$ that will make the value of the expression $7 \times \frac{a}{b}$ equal to 7.

**Answer**

A would be 1 and $b$ would also be a 1. $7 \times \frac{1}{1} = 7$.

**Score Point 1 (out of 2 points)**

This response demonstrates only a partial understanding of the mathematical concepts in the task. The relationship between $a$ and $b$ being equal is correctly described; however, the relationship between $n$ and 4 is incorrect. Note that although $a$ and $b$ are assigned the specific value of 1 even though they could be any value as long as they are equal, this error is considered inconsequential and does not detract from the response.
Describe the relationship between $n$ and 4 that will make the value of the expression $7 \times \frac{n}{4}$ greater than 7.

Answer

Cause $7 \times 4 = 28$ so 28 is greater than 7.

Describe the relationship between $a$ and $b$ that will make the value of the expression $7 \times \frac{a}{b}$ equal to 7.

Answer

Cause $a$ and $b$ are not a number they have no value so 7 is equal to 7.

Score Point 0 (out of 2 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The variable $n$ is not addressed and the explanation for the second expression reflects a lack of understanding of variables.
Score Point 0 (out of 2 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The explanation for the first expression incorrectly equates $7 \times \frac{1}{4}$ and $7 \times 4$. Although there is a correct explanation of the identity property of multiplying by 1 for the second expression, only $b$ is set equal to 1: the variable $a$ is not addressed.
Rosalva and Jake walked a certain distance each day. They recorded the distances in the table shown below.

**DISTANCE WALKED**

<table>
<thead>
<tr>
<th></th>
<th>Rosalva (kilometers)</th>
<th>Jake (meters)</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

What is the difference, in meters, between Rosalva’s and Jake’s total distances walked over the four days?

**Show your work.**

Rosalva

\[1.5\text{km} = 1500\text{m}; 0.69\text{km} = 690\text{m}; 1.04\text{km} = 1040\text{m}; 2.1\text{km} = 2100\text{m}\]

\[1500 + 690 = 2190 \quad 2190 + 1040 = 3230 \quad 3230 + 2100 = 5330\]

Jake

\[1450 + 1590 = 3040 \quad 3040 + 1204 = 4244 \quad 4244 + 1977 = 6221\]

Difference

\[6221 - 5330 = 891\]

Or other valid process

**Answer**: 891 meters
Rosalva and Jake walked a certain distance each day. They recorded the distances in the table shown below.

### DISTANCE WALKED

<td>1,977</td>
</tr>
<tr>
<td>Total</td>
<td>5.33</td>
<td>6,281</td>
</tr>
</tbody>
</table>

What is the difference, in meters, between Rosalva’s and Jake’s total distances walked over the four days?

*Show your work.*

**Answer:** 122 meters

**Score Point 1 (out of 2 points)**

This response demonstrates only a partial understanding of the mathematical concepts in the task. The total distance walked for each person is appropriately and correctly calculated; however, an incorrect solution of 122 meters is given with no support in the work for how that value was obtained. The response addresses only some elements of the task.
Rosalva and Jake walked a certain distance each day. They recorded the distances in the table shown below.

**DISTANCE WALKED**

<table>
<thead>
<tr>
<th></th>
<th>Rosalva (kilometers)</th>
<th>Jake (meters)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monday</td>
<td>1.600</td>
<td>1.450</td>
</tr>
<tr>
<td>Tuesday</td>
<td>0.690</td>
<td>1.590</td>
</tr>
<tr>
<td>Wednesday</td>
<td>1.040</td>
<td>1.204</td>

<td>2.100</td>
<td>1.977</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

What is the difference, in meters, between Rosalva’s and Jake’s total distances walked over the four days?

**Show your work.**

\[
\begin{align*}
\text{Rosalva:} & \quad 1,100 + 1,500 + 1,040 + 2,100 = 6,740 \\
\text{Jake:} & \quad 1,450 + 1,590 + 1,204 + 1,977 = 6,221 \\
\text{Difference:} & \quad 6,740 - 6,221 = 519 \\
\end{align*}
\]

**Answer**  519 meters

**Score Point 1 (out of 2 points)**

This response demonstrates only a partial understanding of the mathematical concepts in the task. The total distance walked for each person is appropriately calculated, kilometers are correctly converted into meters, and the difference between the two totals is found; however, a calculation error occurs when determining the total distance walked by Jake (6,211), resulting in an incorrect solution. Although the solution is incorrect, appropriate procedures are applied.
GUIDE PAPER 6

Rosalva and Jake walked a certain distance each day. They recorded the distances in the table shown below.

**DISTANCE WALKED**

<table>
<thead>
<tr>

\end{align*}
\]

*Answer* 6.231 meters

**Score Point 0 (out of 2 points)**

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. Only the distances walked by Jake are added and a calculation error results in an incorrect solution.
Antoine wrote the expressions shown below.

- Expression A: \[4 \times [(1.5 + 100.25) \times 3.65]\]
- Expression B: \[\square \times [(1.5 + 100.25) \times 3.65]\]

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

*Show your work or explain how you determined this number.*

---

**Answer**

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________
Antoine wrote the expressions shown below.

- Expression A: $4 \times [(1.5 + 100.25) \times 3.65]$
- Expression B: $\square \times [(1.5 + 100.25) \times 3.65]$

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

*Show your work or explain how you determined this number.*

Only the number outside needs to be multiplied, so
$4 \times 8 = 32$

*Answer*

Since the only difference between Expression A and B is the unknown in
expression B, only the number outside of the brackets needs to be multiplied
by 8. Therefore the unknown number would be 32.

OR other valid explanation
Antoine wrote the expressions shown below.

- Expression A: \[ 4 \times [(1.5 + 100.25) \times 3.65] \]
- Expression B: \[ \square \times [(1.5 + 100.25) \times 3.65] \]

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

\[ 4 \times 8 = \boxed{32} \]

Answer

I know that the box in expression B is equal to 32. This is because expression B is told to be eight times Expression A. So, all you have to do is take 4\times 8. This will equal 32.

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The correct solution is given and the explanation correctly identifies the need to only multiply the number outside of the brackets.
Antoine wrote the expressions shown below.

- Expression A: $4 \times [(1.5 + 100.25) \times 3.65]$
- Expression B: $\Box \times [(1.5 + 100.25) \times 3.65]$

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

**Answer**

32 because $4 \times 8 = 32$ and in the problem it said 8 times the value of Expression A

---

**Score Point 2 (out of 2 points)**

This response demonstrates a thorough understanding of the mathematical concepts in the task. The correct solution is given and the explanation correctly identifies the need to only multiply the number outside of the brackets.
Antoine wrote the expressions shown below.

- Expression A: $4 \times [(1.5 + 100.25) \times 3.65]$
- Expression B: $\frac{4}{3} \times [(1.5 + 100.25) \times 3.65]$

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

\[
\begin{array}{c}
4 \\
\times \frac{4}{3} \\
\hline
32
\end{array}
\]

\textbf{Answer}

Score Point 2 (out of 2 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. While no verbal explanation is written, the work shown is sufficient to establish the need to only multiply the number outside of the brackets: the prompt only directed students to either show their work OR explain how they determined the number. Note that as per Scoring Policy #2, although the answer is not written in the answer blank it should still receive full credit.
Antoine wrote the expressions shown below.

- Expression A: \[4 \times [(1.5 + 100.25) \times 3.65]\]
- Expression B: \[\square \times [(1.5 + 100.25) \times 3.65]\]

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

Answer

I think the number in the box will be 32. I'm determined this number is 8 because it said the value of expression B is 8 times the value of expression A.

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The correct solution of 32 is given; however, the explanation given is only a repetition of the prompt. The response correctly addresses only some elements of the task.
Antoine wrote the expressions shown below.

- Expression A: \(4 \times [(1.5 + 100.25) \times 3.65]\)
- Expression B: \(\text{Box} \times [(1.5 + 100.25) \times 3.65]\)

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

\[
\begin{array}{c}
100.25 \\
+ \text{1.50} \\
\hline
101.75
\end{array}
\]

\[
[(1.5 + 100.25) \times 3.65] \\
\frac{1}{112} \\
\frac{101.75}{3.65} \\
\frac{5.08}{6.105} \\
\frac{3.0525}{371.3875}
\]

Answer

Times 4 by 8. Then do the math problem.

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. A correct explanation is given of multiplying \(4 \times 8\); however, the product of 32 is never recorded. Additionally, the full expression is evaluated when the prompt directed not to do so. The response correctly addresses only some elements of the task.
Antoine wrote the expressions shown below.

- Expression A: \(4 \times [(1.5 + 100.25) \times 3.65]\)
- Expression B: \(\square \times [(1.5 + 100.25) \times 3.65]\)

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

\[
\begin{align*}
1.5 + 100.25 &= 101.75 \\
\times 3.65 &= 570.875 \\
570.875 + 176.5 &= 747.375 \\
3405 - 25100 &= -17705 \\
31792.75
\end{align*}
\]

Answer

The determined number in Expression B is 32 because they have the same numbers except for one number being 8 times larger than the other.

Score Point 1 (out of 2 points)

This response demonstrates only a partial understanding of the mathematical concepts in the task. The correct solution of 32 is given; however, the language in the explanation given is insufficient to distinguish it from a repetition of the prompt. Additionally, the full expression is evaluated when the prompt directed not to do so. The response correctly addresses only some elements of the task.
Antoine wrote the expressions shown below.

- Expression A: \[ 4 \times [(1.5 + 100.25) \times 3.65] \]
- Expression B: \[ 8 \times [(1.5 + 100.25) \times 3.65] \]

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

**Answer**

I determined this number because in the text it says that expression B was eight times the value the expression A.

**Score Point 0 (out of 2 points)**

This response is incorrect and does not demonstrate even a limited understanding of the mathematical concepts in the task. The value of 8 written does not take into account the value of 4 already existing in Expression A and the explanation given is only a repetition of the prompt.
Antoine wrote the expressions shown below.

- Expression A: \(4 \times [(1.5 + 100.25) \times 3.65]\)
- Expression B: \(\_ \times [(1.5 + 100.25) \times 3.65]\)

The value of Expression B is eight times the value of Expression A. Without evaluating Expression A, determine what number belongs in the box in Expression B. Explain how you determined this number.

Show your work or explain how you determined this number.

\[
\begin{align*}
4 \times 8 & \quad 1.55 \times 8 \quad 100.25 \times 8 \quad 3.65 \times 8 \\
32 & \quad 124.41 & \quad 124 \quad 32 \\
\hline
\end{align*}
\]

Answer:

\[\text{I times "Expression A by 8" and then I added what I got.}\]

Score Point 0 (out of 2 points)

This response is incorrect and does not demonstrate even a limited understanding of the mathematical concepts in the task. Although some elements of the work contain correct mathematical procedures \((4 \times 8 = 32)\), other values inside of the brackets were also inappropriately multiplied by 8 and the verbal explanation given is incorrect.
Andy has a collection of movie DVDs. In Andy’s collection,

- $\frac{3}{5}$ of the DVDs are “Action,” and
- $\frac{1}{4}$ of the DVDs are “Comedy.”

Andy said that $\frac{4}{9}$ of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

What fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”?

*Show your work.*

*Answer* _______
EXEMPLARY RESPONSE

Andy has a collection of movie DVDs. In Andy's collection,

- \(\frac{3}{5}\) of the DVDs are “Action,” and
- \(\frac{1}{4}\) of the DVDs are “Comedy.”

Andy said that \(\frac{4}{9}\) of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because he did not find a common denominator to add the fractions. He just added the numerators and denominators as they are, he should have gotten \(\frac{17}{20}\). OR other valid explanation

What fraction of the DVDs in Andy's collection is not “Action” or “Comedy”?

Show your work.

\[
\frac{3}{5} + \frac{1}{4} = \frac{12}{20} + \frac{5}{20} = \frac{17}{20}
\]

\[
1 - \frac{17}{20} = \frac{20}{20} - \frac{17}{20} = \frac{3}{20}
\]

OR other valid response

Answer \(\frac{3}{20}\)
Andy has a collection of movie DVDs. In Andy's collection,

- \( \frac{3}{5} \) of the DVDs are "Action" and
- \( \frac{1}{4} \) of the DVDs are "Comedy."

Andy said that \( \frac{3}{5} \) of his collection is "Action" or "Comedy." Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because he added the two fractions incorrectly. He is supposed to find a common denominator for 5 and 4 which is 20. Then he has to multiply the numerator: \( \frac{3 \times 4}{5 \times 4} \) and \( \frac{1 \times 5}{4 \times 5} \). Then what fraction of the DVDs in Andy's collection is not "Action" or "Comedy"? He adds. His answer should be

Show your work.

\[
\frac{3}{5} + \frac{1}{4} = \frac{12}{20} + \frac{5}{20} = \frac{17}{20}
\]

\[
\frac{20}{20} - \frac{17}{20} = \frac{3}{20}
\]

Answer: \( \frac{3}{20} \)

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error and the fraction of the DVD collection that is not “Action” or “Comedy” is correctly calculated.
Andy has a collection of movie DVDs. In Andy’s collection,

$$\frac{12}{20} = \frac{3}{5} \text{ of the DVDs are “Action” and}$$

$$\frac{5}{20} = \frac{1}{4} \text{ of the DVDs are “Comedy.”}$$

Andy said that $\frac{3}{5}$ of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect. He is incorrect because instead of finding a common denominator, he added the denominators $5$ with the denominator $4$, to get $9$. And what fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”? Add the numerator $3$ to the numerator $1$, to get $\frac{4}{9}$.

\[
\frac{12 + 5}{20} = \frac{17}{20}
\]

\[
\frac{20 - 17}{20} = \frac{3}{20}
\]

Answer $\frac{3}{20}$

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error and the fraction of the DVD collection that is not “Action” or “Comedy” is correctly calculated.
Andy has a collection of movie DVDs. In Andy’s collection,
\[ \frac{12}{20} - \frac{5}{20} = \frac{17}{20} \]
* 3/5 of the DVDs are “Action” and
* 1/2 of the DVDs are “Comedy.”

Andy said that 4/5 of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because \( \frac{3}{5} + \frac{1}{4} = \frac{17}{20} \).

What fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”?

Show your work.

\[ \frac{20}{3} - \frac{17}{3} = \frac{3}{20} \]

Answer: \( \frac{3}{20} \)

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error and the fraction of the DVD collection that is not “Action” or “Comedy” is correctly calculated. Note that although some of the work shown is not in the designated “Show your work” area, as per Scoring Policy #1, it should still be scored.
Andy has a collection of movie DVDs. In Andy’s collection,

- \( \frac{2}{3} \) of the DVDs are “Action” and
- \( \frac{1}{4} \) of the DVDs are “Comedy.”

Andy said that \( \frac{2}{3} \) of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because \( \frac{2}{3} + \frac{1}{4} \) does not equal \( \frac{7}{12} \).

What fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”?

Show your work.

\[
\frac{3}{5} - \frac{12}{20} = \frac{12}{20} + \frac{5}{20} = \frac{17}{20}
\]

Answer: \( \frac{17}{20} \)

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. The explanation correctly identifies that Andy made an error but does not sufficiently explain why it was incorrect. However, the fraction of the DVD collection that is not “Action” or “Comedy” is correctly calculated. The response correctly addresses most, but not all, aspects of the task.
Andy has a collection of movie DVDs. In Andy's collection,

- $\frac{3}{5}$ of the DVDs are "Action" and
- $\frac{1}{2}$ of the DVDs are "Comedy."

Andy said that $\frac{4}{5}$ of his collection is "Action" or "Comedy." Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because he is supposed to find a common multiple of $1, 5$

What fraction of the DVDs in Andy's collection is not "Action" or "Comedy"?

Show your work.

\[
\frac{5}{20} + \frac{12}{20} = \frac{3}{20}
\]

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error and the fraction of the DVD collection that is not “Action” or “Comedy” is correctly calculated. However, the required work is limited: $\frac{3}{2}$ and $\frac{1}{4}$ are correctly given a common denominator, but their summation is not shown.
Andy has a collection of movie DVDs. In Andy’s collection,

- \( \frac{3}{5} \) of the DVDs are “Action” and
- \( \frac{1}{4} \) of the DVDs are “Comedy.”

Andy said that \( \frac{4}{5} \) of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because Andy added the denominators which never change. He needs to find the common denominator.

What fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”?

Show your work.

\[
\begin{align*}
5: & \quad \frac{3}{5} - \frac{12}{20} \\
4: & \quad \frac{1}{4} - \frac{5}{20} \\
& \quad \frac{17}{20}
\end{align*}
\]

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error; however, although \( \frac{3}{5} \) and \( \frac{1}{4} \) are correctly given a common denominator and calculated to \( \frac{17}{20} \), no attempt is made to subtract this value from 1, resulting in an incorrect solution. The response correctly addresses most, but not all, aspects of the task.
Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error; however, although the response determines the correct common denominator of 20, the numerators are not correctly addressed and no attempt is made to subtract the sum of $\frac{9}{20}$ from 1. The response reflects a lack of essential understanding of the underlying concepts.
Andy has a collection of movie DVDs. In Andy's collection.

- 2/3 of the DVDs are "Action" and
- 1/4 of the DVDs are "Comedy."

Andy said that 4/5 of his collection is "Action" or "Comedy." Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because 4/5 is not equivalent to 2/3 or 1/5 which are "Action" and "Comedy."

What fraction of the DVDs in Andy's collection is not "Action" or "Comedy"?

Show your work.

\[
\frac{\frac{2}{3} + \frac{1}{5}}{5} = \frac{12 + 5}{30} = \frac{17}{30}
\]

\[
\text{Answer: } \frac{17}{30}
\]

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The fraction of DVDs that are “Action” or “Comedy” is correctly calculated; however, no attempt is made to subtract that value from 1 to determine the fraction of DVDs not in those genres, and the explanation does not correctly identify Andy’s error. The response correctly addresses only some elements of the task.
Andy has a collection of movie DVDs. In Andy's collection,

- \( \frac{3}{2} \) of the DVDs are “Action” and
- \( \frac{1}{4} \) of the DVDs are “Comedy.”

Andy said that \( \frac{4}{3} \) of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because he just added the numerator and the denominator. But you have to find the common denominator. Then add.

What fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”?

Show your work.

\( ? \)

Answer 7

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The explanation correctly identifies Andy’s error; however, the second question of the problem is not addressed. The response correctly addresses only some elements of the task.
Andy has a collection of movie DVDs. In Andy's collection,

- \( \frac{3}{4} \) of the DVDs are “Action” and
- \( \frac{1}{2} \) of the DVDs are “Comedy.”

Andy said that \( \frac{4}{5} \) of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

He is correct because \( \frac{3}{5} \) are action and \( \frac{1}{4} \) are comedy and that added together is \( \frac{4}{4} \).

What fraction of the DVDs in Andy's collection is not “Action” or “Comedy”?

Show your work.

\[
\frac{1}{4} \times \frac{3}{5} = \frac{31}{20} = \frac{3}{20}
\]

Answer: \( \frac{3}{20} \)

Score Point 0 (out of 3 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The explanation incorrectly asserts that Andy made no errors. Although the correct solution of \( \frac{3}{20} \) is present in the work, it is obtained through an obviously incorrect multiplication procedure.
Andy has a collection of movie DVDs. In Andy’s collection,

- $\frac{3}{5}$ of the DVDs are “Action” and
- $\frac{1}{4}$ of the DVDs are “Comedy.”

Andy said that $\frac{4}{5}$ of his collection is “Action” or “Comedy.” Cynthia said that Andy made an error. Explain whether Andy is correct or incorrect and why.

Andy is incorrect because he added $\frac{1}{4}$ with $\frac{3}{5}$, and you get $\frac{4}{5}$ to be added wrong.

What fraction of the DVDs in Andy’s collection is not “Action” or “Comedy”?

Show your work.

\[ \frac{4}{5} - \frac{3}{5} = \frac{1}{4} \]

\[ \frac{1}{4} \]

Score Point 0 (out of 3 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. The explanation given does not sufficiently identify Andy’s error, and the given values are inappropriately and incorrectly subtracted when determining the solution.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

Answer $\underline{\hspace{2cm}}$
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

*Show your work.*

\[
12.5 \div 2.5 = 5 \text{ dog beds}
\]

\[
\$17.50 \times 5 = \$87.50 \text{ made}
\]

\[
12.5 \times \$4.50 = \$56.25 \text{ cost of fabric}
\]

\[
\$87.50 - \$56.25 = \$31.25 \text{ profit}
\]

OR other valid response

*Answer* $\boxed{31.25}$
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

Answer $31.25

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The total cost of fabric, number of beds to be made, and total sales revenue are all appropriately and correctly calculated and well-labeled and used to determine the net profit.
GUIDE PAPER 2

Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work:

\[
\begin{align*}
\text{Cost of fabric:} & \quad 12.5 \times 4.50 = 56.25 \\
\text{Total sales revenue:} & \quad 5 \times 17.50 = 87.50 \\
\text{Net profit:} & \quad 87.50 - 56.25 = 31.25
\end{align*}
\]

Answer: $31.25 was her profit

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The total cost of fabric, number of beds to be made, and total sales revenue are all appropriately and correctly calculated and used to determine the net profit.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

**Show your work.**

\[
\begin{align*}
4.50 & \quad 2.5 \quad 19.5 \\
& \quad 2.5 \\
& \quad 10 \\
& \quad -5 \\
& \quad 5 \\
& \quad -5 \\
& \quad -5 \\
& \quad 54.00 + 2.25 = 56.25
\end{align*}
\]

54.00 + 2.25 = 56.25

\[
\begin{align*}
17.50 & \quad 56.25 \\
& \quad 56.25 \\
& \quad -56.25 \\
& \quad 31.25
\end{align*}
\]

**Answer 3**

31.25

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. The total cost of fabric, number of beds to be made, and total sales revenue are all appropriately and correctly calculated and used to determine the net profit.
GUIDE PAPER 4

Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\begin{align*}
12.5 & \times 4.50 \\
6.60 & + 50.00 \\
\underline{56.25} &
\end{align*}
\]

\[
\begin{align*}
17.50 & \times 4 \\
70.00 & + 2.5 \\
12.0 &
\end{align*}
\]

\[
\begin{align*}
56.25 & - 70.00 \\
-13.75 &
\end{align*}
\]

Answer $23.75$

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. The total cost of fabric and total sales revenue are appropriately calculated and used to determine the net profit; however, a calculation error when solving for the number of beds to be made (2.5 + ... = 12.0, 4 dog beds) results in an incorrect solution. Although the solution is incorrect, appropriate procedures are applied.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\text{fabric} - 12.5 \text{ yards} = \$4.50
\]

\[
2.5 - \text{each dog}
\]

\[
2.5 \sqrt{25}
\]

\[
2.5 \\
2.5 \\
1.0
\]

\[
3 \times 17.50 = 52.50
\]

\[
52.50 - 4.50 = 48.00
\]

\[
83.00
\]

Answer $83.00

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. The number of beds to be made and the total sales revenue are appropriately and correctly calculated; however, the solution incorrectly subtracts only the cost of a single yard of fabric ($87.50 – 4.50 = $83.00). The response correctly addresses most, but not all, aspects of the task.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\begin{align*}
12.50 & \times 4.50 \\
6.2500 & \text{(12.50 x 0.50)} \\
50.0000 & \text{(2.50 x 20.00)} \\
56.2500 & \text{(total)}
\end{align*}
\]

Answer $81.50

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. The total cost of fabric, number of beds to be made, and the total sales revenue are all appropriately and correctly calculated; however, no attempt is made to subtract the cost of the fabric from the revenue. The response addresses most, but not all, aspects of the task.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\begin{array}{c}
\times 17.50 \\
\underline{12.5} \\
\underline{-20.0} \\
\underline{25.0} \\
\underline{-2.5} \\
\underline{87.50}
\end{array}
\]

Answer $87.50

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The number of beds to be made and the total sales revenue are appropriately and correctly calculated; however, no attempt is made to calculate the total cost of fabric or to subtract any initial costs from the revenue to determine the net profit. The response addresses some elements of the task correctly, but is incomplete.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\begin{array}{c}
12.5 \\
\times 4.50 \\
0.00 \\
62.50 \\
+ 500.00 \\
\hline
562.50 \\
\end{array}
\]

\[
\begin{array}{c}
81250 \\
\times 2.5 \\
0.00 \\
18750 \\
35000 \\
\hline
43750 \\
\end{array}
\]

\[
\begin{array}{c}
562.50 \\
- 437.50 \\
\hline
1250 \\
\end{array}
\]

Answer $1250

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The total cost of fabric is correctly calculated; however, the value of 2.5 is misinterpreted as the number of beds to be made and inappropriately multiplied by $17.50 resulting in an incorrect value for total sales revenue. Additionally, although the difference between revenue and the cost of fabric is found, the subtraction is performed in the incorrect order. The response exhibits multiple flaws related to misunderstanding of important aspects of the task.
GUIDE PAPER 9

53

Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\begin{array}{c}
10 \\
-2.5 \\
-7.5 \\
\hline
2.5 \sqrt{125} \\
125 \\
-125 \\
\hline
0 \\
17.50 \\
-17.50 \\
\hline
0.00 \\
17.50 \\
17.50 \\
\hline
0.00
\end{array}
\]

Answer $17.50

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. 12.5 is appropriately divided by 2.5 to solve for the number of beds to be made; however, a calculation error leads to an incorrect result. 10 is then correctly multiplied by 17.50 to determine the total sales revenue; however, only the cost of a single yard of fabric is subtracted from this value to determine the net profit. The response exhibits multiple flaws related to misunderstanding of important aspects of the task.
Molly bought 12.5 yards of fabric for $4.50 a yard to make dog beds. She uses 2.5 yards of fabric for each dog bed. She sells each dog bed for $17.50. After subtracting the cost of the fabric, how much money does Molly earn if she sells all of the dog beds?

Show your work.

\[
\begin{align*}
4.50 & \times 12.50 = 56.25 \\
4.50 & \div 9.00 = 0.50 \\
4.50 & \div 2.25 = 2.00
\end{align*}
\]

Answer: $56.25

Score Point 0 (out of 3 points)

Although some elements contain correct procedures (2.5 = $11.25, which is the correct cost of a single dog bed using 2.5 yards of fabric), multiple other unrelated or inappropriate calculations are shown (450 × 3, 12.50 ÷ 4.50, etc.). Holistically, this response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task.
GUIDE PAPER 11

Score Point 0 (out of 3 points)

Although some elements contain correct procedures (125 ÷ 25 = 5 as a proxy for 12.5 ÷ 2.5), the cost of a single yard of fabric is inappropriately added to the sale price of a single dog bed. The value of 5 is then misinterpreted as a dollar amount and inappropriately subtracted from the previous sum. Holistically, this response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task.
In a race that consisted of three parts, the cycling part was $12\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

*Show your work.*

*Answer* ______________ miles
EXEMPLARY RESPONSE

In a race that consisted of three parts, the cycling part was $12\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

*Show your work.*

Cycling: $12\frac{1}{2}$ miles

Running: $12\frac{1}{2} \times \frac{1}{4} = 3\frac{1}{8}$ miles

Kayaking: $3\frac{1}{8} \times \frac{1}{2} = 1\frac{9}{16}$ miles

Total:

$12\frac{1}{2} + 3\frac{1}{8} + 1\frac{9}{16}$

$=12\frac{8}{16} + 3\frac{2}{16} + 1\frac{9}{16}$

$=16\frac{19}{16}$

$=17\frac{3}{16}$

OR other valid response

*Answer* $17\frac{3}{16}$ miles
In a race that consisted of three parts, the cycling part was 12 $\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

Show your work.

\[
\begin{align*}
\text{Cycling part:} & \quad 12 \times 2 = 24 \\
\text{Running part:} & \quad \frac{25}{8} \times \frac{1}{2} = \frac{25}{16} = \frac{13}{8} \\
\text{Kayaking part:} & \quad \frac{25}{8} = \frac{50}{16} \\
\text{Total distance:} & \quad \frac{250}{16} + \frac{225}{16} = \frac{475}{16} = 29 \frac{3}{16}\text{ miles}
\end{align*}
\]

Answer: $17 \frac{3}{16}$ miles

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. Appropriate and correct multiplication of fractions is used to determine the distances of each part of the race, which are then correctly added to determine the total distance of the race.
In a race that consisted of three parts, the cycling part was $12\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

**Show your work.**

\[
\begin{align*}
12 &= \frac{1}{2} \\
3,125 &= \frac{1}{4} \\
2,562.5 &= \frac{1}{2}
\end{align*}
\]

\[
\frac{1,562.5 + 1,562.5 + 3,125}{2} = \frac{6,250}{2} = 3,125
\]

**Answer** 7,187.5 miles

---

**Score Point 3 (out of 3 points)**

This response demonstrates a thorough understanding of the mathematical concepts in the task. The value $12\frac{1}{2}$ is correctly converted into a decimal format before dividing to determine the distances of each part of the race, which are then correctly added to determine the total distance of the race.
In a race that consisted of three parts, the cycling part was $12\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

**Show your work.**

1) **Cycling**

\[ 12\frac{1}{2} \times \frac{1}{4} \]

\[ \frac{25}{2} \times \frac{1}{4} = \frac{25}{8} \]

\[ \frac{25}{8} = 3\frac{1}{8} \text{ miles} \]

2) **Running**

\[ 25 \times \frac{1}{2} = 25 \times \frac{1}{2} = \frac{25}{16} = 1\frac{9}{16} \text{ miles} \]

3) **Kayaking**

\[ 3\frac{1}{8} \times \frac{1}{2} = \frac{25}{16} \times \frac{1}{2} = \frac{25}{32} = 1\frac{7}{32} \text{ miles} \]

4) **Whole Race**

\[ \frac{57}{8} \text{ miles} \]

5) **Check**

\[ \frac{25}{8} + \frac{25}{16} + \frac{25}{32} = \frac{38\frac{1}{8}}{32} = \frac{38\frac{1}{8}}{32} = \frac{38\frac{1}{8}}{32} = \frac{38\frac{1}{8}}{32} = 12\frac{1}{2} \text{ miles} \]

**Score Point 3 (out of 3 points)**

This response demonstrates a thorough understanding of the mathematical concepts in the task. Appropriate and correct multiplication of fractions is used to determine the distances of each part of the race, which are then correctly added to determine the total distance of the race.
In a race that consisted of three parts, the cycling part was 12\( \frac{1}{2} \) miles long. The running part of the race was \( \frac{1}{4} \) the distance of the cycling part. The kayaking part of the race was \( \frac{1}{2} \) the distance of the running part. What was the entire distance, in miles, of the race?

**Show your work.**

\[
12\frac{1}{2} \times \frac{1}{4} = \frac{25}{2} \times \frac{1}{4} = \frac{81}{8} = 3\frac{3}{8}
\]

\[
3 \frac{1}{2} \times \frac{1}{2} = \frac{7}{2} \times \frac{1}{2} = \frac{14}{4} = \frac{7}{2}
\]

\[
2\frac{1}{2} + 3\frac{1}{3} + 1\frac{9}{16} = 2\frac{8}{16} + 3\frac{2}{16} + 1\frac{9}{16} = 6\frac{19}{16} = 7\frac{3}{16}
\]

**Answer** \( 7\frac{3}{16} \) miles

**Score Point 2 (out of 3 points)**

This response demonstrates a partial understanding of the mathematical concepts in the task. Appropriate and correct multiplication of fractions is used to determine the distances of each part of the race; however, when adding the distances to determine the total distance, 12\( \frac{1}{2} \) is incorrectly transcribed as 2\( \frac{1}{2} \), an error which is carried through the calculation resulting in an incorrect solution. Although the solution is incorrect, appropriate procedures are applied.
In a race that consisted of three parts, the cycling part was 12 1/2 miles long. The running part of the race was 1/4 the distance of the cycling part. The kayaking part of the race was 1/2 the distance of the running part. What was the entire distance, in miles, of the race?

**Show your work.**

Answer: 17.375 miles

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. Appropriate multiplication of fractions is used to determine the distances of each part of the race, which are then correctly added to determine the total distance of the race; however a calculation error occurs when determining the fractional component of the running part of the race (1/4 of 2/4 = 1/4), and this error is carried through the rest of the work with no further mistakes. The response correctly addresses most, but not all, aspects of the task.
In a race that consisted of three parts, the cycling part was \(12\frac{1}{2}\) miles long. The running part of the race was \(\frac{1}{4}\) the distance of the cycling part. The kayaking part of the race was \(\frac{1}{2}\) the distance of the running part. What was the entire distance, in miles, of the race?

*Show your work.*

\[
\left(\frac{25}{a}\right) \times \frac{1}{4} = \frac{25}{8}
\]

\[
\frac{25}{8} \times \frac{1}{2} = \frac{25}{16} = \frac{9}{16}
\]

\[
\frac{16}{32} \frac{18}{16} \frac{25}{64}
\]

\[\text{Answer: } \frac{9}{16} \text{ miles}\]

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. Appropriate and correct multiplication of fractions is used to determine the distances of each part of the race; however, no attempt is made to add the parts together to solve for the entire distance. The response addresses most, but not all, aspects of the task.
In a race that consisted of three parts, the cycling part was 12 1/2 miles long. The running part of the race was 1/4 the distance of the cycling part. The kayaking part of the race was 1/2 the distance of the running part. What was the entire distance, in miles, of the race?

Show your work.

\[
\begin{align*}
3 \frac{1}{8} &= \text{running} \\
1 \frac{9}{16} &= \text{kayaking}
\end{align*}
\]

Answer \(7 \frac{3}{16}\) miles

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. Although the solution is correct, the required work is limited. The correct distances of the running and kayaking portions of the race are listed, but no operations are shown to support how either they or the solution were obtained.
in a race that consisted of three parts, the cycling part was 12 1/2 miles long. The running part of the race was 1/4 the distance of the cycling part. The kayaking part of the race was 1/2 the distance of the running part. What was the entire distance, in miles, of the race?

Show your work.

\[
12 \frac{1}{2} \times \frac{1}{4} = \frac{25}{2} \times \frac{1}{4} \times \frac{1}{2} = \frac{25}{16}
\]

\[
\frac{1}{2} \times \frac{16}{2} = \frac{1}{2} \times \frac{16}{3} = \frac{16}{6} = \frac{8}{3}
\]

\[
-\frac{9}{16}
\]

Answer: \[\frac{9}{16}\] miles

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. An appropriate and correct multiplication is shown to calculate the distance of the kayaking portion of the race; however, the running portion of the race is not addressed and no attempt is made to add the portions together to determine a total distance. The response addresses some elements of the task, but is incomplete.
GUIDE PAPER 9

In a race that consisted of three parts, the cycling part was \(12\frac{1}{2}\) miles long. The running part of the race was \(\frac{3}{4}\) the distance of the cycling part. The kayaking part of the race was \(\frac{1}{2}\) the distance of the running part. What was the entire distance, in miles, of the race?

Show your work.

\[
12\frac{1}{2} \div \frac{3}{4} = 3
\]

\[
3 \div \frac{1}{2} = 1\frac{1}{2}
\]

\[
12\frac{1}{2} - 3 - 1\frac{1}{2} = 17
\]

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. Although the distances of each portion of the race are correctly calculated, the multiplication to solve for the individual portions is inappropriately written using a division symbol \((3 \div \frac{1}{2} = 1\frac{1}{2})\), and a calculation error occurs when solving the distance of the running portion \((12\frac{1}{2} + \frac{1}{4} = 3)\). The response exhibits multiple flaws related to misunderstanding of important aspects of the task and misuse of mathematical procedures.
GUIDE PAPER 10

In a race that consisted of three parts, the cycling part was $12\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

Show your work.

\[
12 \frac{1}{2} + \frac{1}{4} + \frac{1}{2} = \\
\frac{25}{2} + \frac{1}{4} + \frac{1}{2} = \frac{21}{8}
\]

Answer $3 \frac{3}{8}$ miles

Score Point 0 (out of 3 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. $\frac{1}{2}$ and $\frac{1}{4}$ are misinterpreted as distances rather than ratios, and the three given values are inappropriately and incorrectly calculated.
In a race that consisted of three parts, the cycling part was $12\frac{1}{2}$ miles long. The running part of the race was $\frac{1}{4}$ the distance of the cycling part. The kayaking part of the race was $\frac{1}{2}$ the distance of the running part. What was the entire distance, in miles, of the race?

**Show your work.**

$$\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}$$

$$12\frac{1}{2} + \frac{1}{4} = 12\frac{3}{4}$$

$$12\frac{3}{4} + \frac{1}{8} = 12\frac{7}{8}$$

**Answer** $12\frac{7}{8}$ miles

**Score Point 0 (out of 3 points)**

Although $\frac{1}{4}$ is appropriately multiplied by $\frac{1}{2}$ to solve for the distance of the kayaking portion of the race and the three distances are correctly calculated to determine a total, $\frac{1}{4}$ is misinterpreted as the distance of the running portion of the race, rather than a ratio comparing it to the cycling portion. Although some elements contain correct procedures, holistically this response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

Answer _________________ boxes of lotion
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

Volume of crate: $24^3 = 24 \times 24 \times 24 = 576 \times 24 = 13,824$

Volume of lotion box: $3^3 = 3 \times 3 \times 3 = 9 \times 3 = 27 \quad \text{512 boxes}$

2 feet = 24 inches

$24 \div 3 = 8 \text{ boxes per row}$

$8^3 = 8 \times 8 \times 8 = 64 \times 8 = 512$

Answer: $\boxed{512}$ boxes of lotion
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

\[
\begin{align*}
24 \times 24 & = 576 \\
\frac{576}{9} & = 64 \\
\frac{2304}{9} & = 256 \\
\frac{11520}{9} & = 1280 \\
\frac{13824}{9} & = 1536 \\
\frac{576}{27} & = 21.48 \\
\frac{2304}{27} & = 85.33 \\
\frac{11520}{27} & = 422.96 \\
\frac{13824}{27} & = 509.38
\end{align*}
\]

Answer: 512 boxes of lotion

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. Feet are correctly converted into inches, the volumes of the shipping crate and lotion boxes are correctly calculated, and those volumes are correctly divided to arrive at the correct solution.
GUIDE PAPER 2

A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work:

\[
\begin{align*}
2 \times 2 \times 2 &= \frac{27}{9} \\
3 \times 3 \times 3 &= \frac{27}{13.5} \\
8 \times 3 &= \frac{24}{8} \\
14 \times 2 &= \frac{28}{14} \\
27 &= \frac{27}{3} \\
\Rightarrow 512 &= \frac{512}{512}
\end{align*}
\]

Answer: 512 boxes of lotion

Score Point 3 (out of 3 points)

This response demonstrates a thorough understanding of the mathematical concepts in the task. Feet are correctly converted into inches, the volumes of the shipping crate and lotion boxes are correctly calculated, and those volumes are correctly divided to arrive at the correct solution.
This response demonstrates a thorough understanding of the mathematical concepts in the task. The number of lotion boxes that will fit in a single row inside of the shipping crate is correctly calculated, and then appropriately and correctly cubed to fill the entire volume of the crate.

**Score Point 3 (out of 3 points)**
Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. Feet are correctly converted into inches, the volumes of the shipping crate and lotion boxes are appropriately calculated, and those volumes are correctly divided; however, a calculation error occurs when determining the volume of the crate (24 \times 24 = 476), resulting in an incorrect solution. Although the solution is incorrect, appropriate procedures are applied.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

Answer: 513 boxes of lotion

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. Feet are correctly converted into inches, the volumes of the shipping crate and lotion boxes are appropriately calculated, and those volumes are divided; however, a calculation error occurs in the division \((13,842 \div 27 = 513)\), resulting in an incorrect solution. Although the solution is incorrect, appropriate procedures are applied.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

Score Point 2 (out of 3 points)

This response demonstrates a partial understanding of the mathematical concepts in the task. Feet are correctly converted into inches, and the volume of a lotion box is appropriately calculated and then the volume of the shipping crate is divided by the volume of a lotion box. However, 24 is only squared instead of cubed when determining the volume of the crate, resulting in an incorrect solution. The response correctly addresses most, but not all, aspects of the task.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

\[
\begin{align*}
3 \text{ in} & \times 3 \text{ in} \times 3 \text{ in} \\
&= 27 \text{ in}^3 \\
&= \frac{27}{1728} \text{ ft}^3 \\
&= \frac{1}{64} \text{ ft}^3
\end{align*}
\]

\[
\begin{align*}
8 \text{ ft} & \times 9 \text{ ft} \\
&= 72 \text{ ft}^2 \\
&\div \frac{1}{64} \text{ ft}^3 \\
&= 4608 \text{ boxes of lotion}
\end{align*}
\]

Answer

3 boxes of lotion

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The volume of a lotion box is appropriately and correctly calculated and then the volume of the shipping crate is divided by the volume of a lotion box; however, the volume of the crate is incorrectly calculated by attempting to convert feet to inches after already cubing the value of 2 feet. (Although it is possible to convert afterwards, the conversion factor changes to 1728 in\(^3\)/ft\(^3\) and the use of 12 in/ft becomes inappropriate.) The response addresses some elements of the task correctly, but reaches an inadequate solution based on faulty reasoning.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

\[ 27 \text{ in} = 1 \frac{3}{4} \text{ ft.} \]
\[ 8 \text{ ft.} \]
\[ 27 \div 12 = 1 \frac{3}{12} = 1 \frac{1}{4} \]

Answer: boxes of lotion

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The sides of the lotion box and shipping crate are appropriately cubed to solve the volumes of each; however, similar to Guide Paper 7, an attempt to convert inches to feet is inappropriately and incorrectly applied after this step \((27 \div 12 = 1 \frac{1}{4})\). Finally, an attempt to divide the volumes is made via trial-and-error multiplication, but arrives at an incorrect solution. The response addresses only some elements of the task correctly, and reflects a lack of essential understanding of the underlying concepts.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

Answer: 2160 boxes of lotion

Score Point 1 (out of 3 points)

This response demonstrates only a limited understanding of the mathematical concepts in the task. The volumes of the shipping crate and lotion box are correctly calculated; however, no attempt is made to convert units, and the volumes are inappropriately multiplied together instead of divided. The response correctly addresses only some elements of the task.
Score Point 0 (out of 3 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. Feet are inappropriately converted to inches after already cubing the value of 2 feet, and the volume of a lotion box is inappropriately found, either via addition or by squaring instead of cubing.
A company puts bottles of lotion into boxes that are three-inch cubes. The boxes were then packed into a shipping crate, shown below.

How many boxes of lotion were packed into the shipping crate to fill it completely?

Show your work.

Volume of shipping crate

Volume of boxes

Answer: 15 boxes of lotion

Score Point 0 (out of 3 points)

This response is not sufficient to demonstrate even a limited understanding of the mathematical concepts in the task. Although an appropriate attempt is made to calculate the volumes of the crate and lotion box via cubing, neither calculation is correct (2 \times \ldots = 6 and 3 \times \ldots = 9). Additionally, no attempt is made to convert units, and the incorrect volumes are inappropriately added together rather than divided.
