Teacher Guide

Grade 7, Module 4A, Unit 3, Lesson 1: "Facebook: Not for Kids" https://www.engageny.org/resource/grade-7-ela-module-4a-unit-3-lesson-1

Overview

Building on the research and decision making that students did in Unit 2, Unit 3 is an extended writing process during which students draft, revise, edit, and publish a research-based position paper. In the first half of the unit, students analyze a model position paper and plan their own. Students have several opportunities to talk through their ideas and get feedback to improve their plans. The midunit assessment is the best first draft of the position paper (RI.7.1, W.7.1a, b, e, and W.7.4). In the second half of the unit, students revise their position papers on the basis of teacher feedback. The end-of-unit assessment is a student reflection on the process of writing the position paper, using evidence from the students' own work (RI.7.1, W.7.1c, d, W.7.4, W.7.5, and L.7.6). Finally, students engage in the performance task, where they will create a visual representation of their position paper to share with their classmates.

This is the first lesson in Unit 3. As noted in the introduction, AIR provides scaffolding differentiated for ELL/MLL students at the Entering (EN), Emerging (EM), Transitioning (TR), and Expanding (EX) levels of English language proficiency in this prototype. We indicate the level(s) for which the scaffolds are appropriate in brackets following the scaffold recommendations (e.g., "[EN]"). Where "[ALL]" is indicated, it means that the scaffold is intended for all levels of students. Scaffolds are gradually reduced as the student becomes more proficient in English.

The following table displays the Expeditionary Learning lesson components as well as the additional supports and new activities (scaffolds and routines) AIR has provided to support ELLs/MLLs.

Facebook: Not for Kids

Expeditionary Learning Lesson Component	AIR Additional Supports	AIR New Activities
	Opening	
Entry task: writing improvement tracker, Module 4A Reflections	Provide a glossary for key terms.	
Reviewing learning targets	None is necessary.	
	Work Time	
Examining a model position paper: First read and partner discussion		Preview the text; enhance background knowledge (expert advisory committees); enhance background knowledge (claims, reasons, evidence, and analysis of

Expeditionary Learning Lesson Component	AIR Additional Supports	AIR New Activities
		evidence); develop vocabulary; engage in close reading; scaffold the Model Position Paper Planner
Analyze the model paper using the argument rubric	Provide rubric for students with student- friendly language; provide home language version of the rubric.	
	Closing and Assessment	
Exit ticket	Provide sentence frames for ELLs/MLLs at Entering and Emerging levels of proficiency.	
Review homework	Familiarize ELLs/MLLs with graphic organizers and vocabulary associated with the activity.	

Text

Facebook: Not for Kids

In many ways Allison is a normal teenager, except for one. She's an exceptional texter. In fact, she quite routinely sends over 900 texts a day. Even though Allison's texting habit may be extreme, her impulse to connect to her peers is not. Teenagers are social. Whether it is due to the evolutionary imperative to find a mate or because they are naturally starting to separate from their parents, teenagers seek out other teens. With the advent of Facebook, this social impulse can be followed any time of the day. However, because an adolescent brain has a developing prefrontal cortex, a highly sensitive risk and reward center, and is entering a period of dynamic growth, Facebook can be particularly toxic when paired with the developing teen brain. For these reasons, the American Academy of Pediatrics should recommend that Facebook raise its minimum age to 18 so teens are on steadier neurological footing before they begin to navigate the social world of Facebook.

Facebook is not a web site for someone with limited access to his or her prefrontal cortex. The prefrontal cortex develops throughout adolescence and is the part of the brain that helps someone control impulses and make sound judgments (Bernstein). Because a teenager's prefrontal cortex is less developed, he or she is more likely to be impulsive ("Teens and Decision Making"). If teenagers are spending a lot of time on Facebook, then they are more likely to make an impulsive or foolish decision online. This is a problem. In real life the consequences for an impulsive, foolish decision may evaporate quickly, but if a person impulsively does something foolish online then that decision can quickly become permanent. It is very easy to make unwise decisions on Facebook. Things like bullying someone, sharing private information, or posting inappropriate pictures can be done, almost without thinking, especially if one's prefrontal cortex is still developing. Raising the age threshold on Facebook will limit the time teenag ers spend on Facebook and will lower their risk of making a foolish decision online.

Perhaps due to the fact that the prefrontal cortex isn't fully available, teenagers rely more on their limbic system, which is more developed, to make decisions ("Teens and Decision Making"). The limbic system is the emotional center of the brain and is also called the "risk and reward" system

(Bernstein). This means that it is the part of the brain that is activated when one does something risky or pleasurable. When a part of the brain, like the limbic system, is "activated," it is awash with neurotransmitters, like dopamine. Dopamine is the main neurotransmitter of the reward system and all addictive substances and addictive behavior increase dopamine in the brain (Giedd). This is important because, compared to adults, teens are highly sensitive to dopamine in their limbic system (Galván). This extra sensitivity and excitability makes them more prone to addiction (Knox). Therefore it seems logical that they may be more prone to becoming addicted to substances or activities that stimulate dopamine. Logging on to Facebook increases the dopamine levels in a person's brain (Ritvo). If teenagers are more prone to addiction and more sensitive to the dopamine released by logging into Facebook, then they may be more vulnerable to becoming "addicted" to Facebook. While this may seem like a harmless pastime, for a teenager, it can be very distracting and debilitating. If the age limit is raised, then teens are less likely to fall prey to this addiction.

The third reason that the AAP should recommend that Facebook raise its minimum age has to do with synaptic pruning. The adolescent brain is in a dynamic stage of development. It is pruning unnecessary synapses and cementing other neurological pathways ("Teens and Decision Making"). A large part of our brain is dedicated to reading social cues because this skill is very important to leading a successful life (Giedd). However, this skill is not automatic. A teenage brain needs time and practice to build these pathways. There are many social skills that cannot be learned online because they are very subtle and require physical proximity (Giedd). These are such things as reading body language, facial expressions, or tone of voice. If someone is spending many hours a day interacting with others on Facebook, then he or she is missing out on an opportunity to build in-person skills. As Facebook becomes more and more popular, teens may use it as a substitute for in-person socializing and spend less time together. If they do that, then they will be pruning very important synapses that are necessary for human interacting. If the age limit for Facebook is raised, then teenagers will be more likely to find a social outlet that nourishes that part of the brain.

Facebook is an extremely popular web site. Nearly one in eight people on the planet have a Facebook account (Giedd). It is lively and evolving part of modern society. However, there are many potential pitfalls on Facebook to the developing teen brain, including addiction, impulsive decision-making, and the missed opportunity to build strong social skills. By recommending that teenagers wait until they are 18 to have an account, the AAP will mitigate these hazards by giving the adolescent brain time to develop further. The prosocial benefits of Facebook will be there when the teen can more wisely and effectively access them.

1. Opening

A. Entry Task: Writing Improvement Tracker, Module 4A Reflections

Expeditionary Learning Teacher and Student Actions

Students reflect on and record their strengths and challenges from the Module 3 essay in their Writing Improvement Tracker. Students then share their strengths and challenges with a partner and discuss how knowing their strengths and challenges will help them with the next essay in this module.

AIR Additional Supports

Clarify the language in the Writing Improvement Tracker for ELLs/MLLs by providing a glossary of key terms. See the following examples of glossed words:

AIR Instructions for Teachers

Ask students to brainstorm about their strengths and challenges by reviewing the Module 3 essay.

• Pair up students and have them share their strengths and challenges.

AIR Instructions for Students

- Brainstorm about the strengths and challenges you had while working on the Module 3 essay.
- Pair up and discuss these strengths and challenges with your partner. This will help you with your next essay.

Example:

revise—change something to make it better

model—a good example

reread—read something again

make sense—be clear or understandable

gist—the important parts

improve—make something better

B. Reviewing Learning Targets

Expeditionary Learning Teacher and Student Actions

Students read and discuss the learning targets with each other, including areas where they anticipate having difficulty. Students discuss their answers with the whole class.

AIR Additional Supports

This exercise is fine as is for ELLs/MLLs.

Example: N/A

2. Work Time

A. Examining a Model Position Paper: First Read and Partner Discussion

Expeditionary Learning Teacher and Student Actions

The teacher reads the model position paper while students read along. The teacher reads the model position paper aloud a second time while students fill out the *Getting the Gist* handout with main ideas and circle words they do not know. Students share what they wrote. The teacher checks understanding for these words and other words from the Domain-Specific Vocabulary anchor chart. The teacher reads the model position paper introduction again, and students fill out the Position Paper Planner. The teacher cold-calls four students to share what they wrote. The teacher walks students through the first paragraph and has students work in pairs to find reasons the author uses to support her claim. Students share what they wrote. Students work in pairs to fill out the rest of the Position Paper Planner and then share their answers with another pair. A representative from each group reports any disagreements. Additional suggestions for meeting students' needs include distributing a writer's glossary and selecting students ahead of time who need additional help so that they can prepare.

AIR Additional Supports

ELLs/MLLs will need a lot of support before they can complete the note catcher and model position paper planner. The suggestions that follow are AIR new activities to support ELLs/MLLs in completing these Expeditionary Learning activities.

 Before the first reading of the passage, preview the text, provide background knowledge, and preteach several abstract words.

- Read the text aloud and support ELLs/MLLs' vocabulary acquisition through defining words during this reading. Words should be selected on the basis of frequency (as they appear in the Academic Word List) and importance in the text.
- After the first reading, engage ELLs/MLLs in a much more scaffolded second reading in which ELLs/MLLs have access to an English glossary and opportunities to answer supplementary questions that will help them unpack the meaning of the text.
- After the second reading have students complete the note catcher and model position paper planner.

Previewing Text (AIR New Activity 1 for Examining a Model Position Paper)

AIR Additional Supports

Use the title to introduce the text.

AIR Instructions for Teachers

Ask the students to think about the meaning of the title "Facebook: Not for Kids." Discuss their thought as a class.

AIR Instructions for Students

The title of this passage is "Facebook: Not for Kids." What do you think the title might mean? Why do you think Facebook should not be for kids?

Enhancing Background Knowledge (AIR New Activity 2 for Examining a Model Position Paper)

AIR Additional Supports

Provide background information related to the role of an expert advisory committee.

AIR Instructions for Teachers

Ask students the guiding question and have them think about it as the read the text and answer supplementary questions. Tell students to use the glossary as needed. Discuss student's responses to the supplementary questions and the ask the guiding question again and discuss student's responses.

AIR Instructions for Students

Read the short text and work with a partner to answer the questions. Use the glossary to look up unfamiliar words. The glossed words are underlined in the text.

"Expert Advisory Committee"

Guiding Question

Why can an expert advisory committee help with a difficult decision?

Text	Glossary
What should you do if you have a complicated, or difficult, problem to solve? You might want to bring together an expert advisory committee. An expert advisory committee is a group of people who know a lot about a subject. They will carefully examine the problem. They will think about	expert—someone who knows a lot about something advisory—giving advice or information to help you decide something
the <u>risks</u> and <u>benefits</u> . And then they will decide what decision they want to <u>endorse</u> , or support. For example, what if you want to decide if your school should sell candy in the school store? Some people think	committee—a group of people who make a decision examine—think about something carefully risk—something dangerous

that it is a good idea, but other people worry that it will					benefit—something good		
make students unhealthy. An advisory committee of				endorse— accept			
_	experts on students and health can make a <u>recommendation</u> about what <u>policy</u> the school should adopt, or use.			recon	nmendation—sug	gestion	
abc				polic	y—a guide for ho	w people should act	
			Word Bank	l

			it claims, reasons, and	l evide	nce.		
AI	R Instructions	for Teachers					
•	Ask students to	read the short text	t using the glossary as	neede	ed.		
•	■ Then, ask students to work with a partner to answer the questions provided.						
	R Instructions						
Re	ad the short text	and answer the que	estions. Use the gloss	ary to 1	look up unfamilia	r words.	
		e, and Analysis of	Evidence				
Guiding Question							
•	■ What are claims, reasons that support a claim, and evidence for reasons?						
		Text			Gl	ossary	

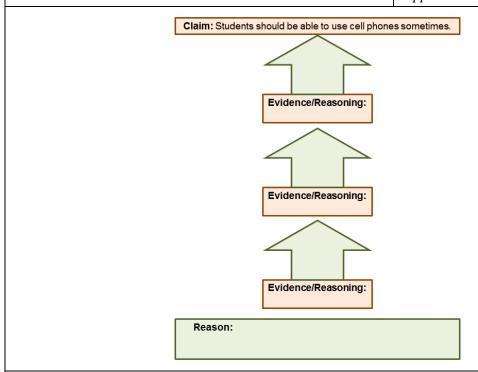

Some schools do not allow students to use cell phones on school property. What if a student wanted to <u>convince</u> the principal to let students use cell phones in certain situations? The best way to <u>persuade</u> the principal is to use reasons and evidence to support your <u>claim</u>. The claim is that students should be allowed to use cell phones at school in certain situations.

convince—get someone to do or
think something
persuade—get someone to change
their mind about something
claim—something you believe to be
true

Reasons are the <u>cause</u> or <u>explanation</u> for an action, <u>opinion</u>, or <u>event</u>. Reasons support a claim. Evidence (also called reasoning) is the proof or facts that <u>support</u> a reason. Here is a graphic example of a claim, reasons that support the claim, and evidence/reasoning for the reason.

cause—something that makes something else happen explanation—words that make something clear or easy to understand opinion—what you think about something event—something important that happens support—help prove

	Word Bank	
cause	explanation	claim
cell phones	situations	proof
facts	support	

Supplementary Questions

What is the claim in the text above? [ALL]

The claim is that students should be allowed to use at school in certain [EN,						
EM]						
The claim is [TR]						
What are reasons? [ALL]						
Reasons are or thefor an action, opinion or event. [EN,EM]						
Reasons are [TR]						
What do reasons support? [ALL]						
Reasons support a [EN,EM, TR]						
What is evidence? [ALL]						
Evidence is the or that a reason. [EN, EM]						
Evidence is [TR]						
Guiding Question						
What are claims, reasons that support a claim, and evidence for reasons?						
Claims are [ALL]						
Reasons are [ALL]						
Evidence is [ALL]						

Building Vocabulary (AIR New Activity 4 for Examining a Position Paper)

AIR Additional Supports

- Pre-teach abstract words and give students access to a glossary for all words that are important for understanding the text or frequent in English.
- During a first reading, read the text aloud to students as they follow along to demonstrate proper pacing and intonation.
- During the reading, use the glossary to define the underlined words that might be challenging for ELLs

AIR Instructions for Teachers

- Pre-teach the abstract word *interact*.
- Give students access to a glossary that includes words key to understanding the text as well as words that appear frequently in the text.
- During a first close reading, define underlined words that are challenging.
- During a second close reading, for each underlined word in the text, have students find the word in their glossary and rewrite it. Later, have them complete a glossary—drawing a picture or writing a word or phrase to help them remember the new word. If they have a first language background that shares cognates with English, have them indicate whether the word is a cognate.
- Provide a glossary for the following words (Academic Word List words are in bold) and other
 words and phrases that are critical for understanding the text and answering questions (see the
 sample glossary that follows).

Paragraph 1	media, American Academy of Pediatrics, current, account, potential,
	development, adolescent, raise, minimum , as it stands

Paragraph 2	normal , evolutionary , exceptional, impulse, social, seek , impulse, adolescent, developing, center, period , dynamic , steady footing, navigate
Paragraph 3	site , access , sound, decision, consequences , evaporate, permanent, bullying, private, inappropriate
Paragraph 4	available, rely, emotional, activate, pleasurable, awash with, addictive substance, adult, sensitive, logical, release, vulnerable, fall prey
Paragraph 5	prune, unnecessary, synapse, cementing, pathway, social cues, automatic , require , physical proximity, interacting , missing out, opportunity, substitute
Paragraph 6	evolving, modern society, pitfall, mitigate

AIR Instructions for Students

- Your teacher will pre-teach one vocabulary word for you.
- Listen as your teacher reads the text aloud.
- When you come to an underlined word in the text, look up its meaning in the glossary. When you have time, draw a picture [EN] or write a phrase [EM, TR, EX] to remember the new word.

Word Card 2

interact

relacionarse

People can

in person or over a phone or computer.

Context: If someone is spending many hours a day interacting with others on Facebook, then he or she is missing out on an opportunity to build in-person skills.

Sentence frame: My favorite way to interact with friends is _____

Teacher says: Let's talk about the word *interact*. Interact means respond to someone, as when you talk with someone. But you also can interact with someone with body language, or by phone or computer.

Interact in Spanish is *relacionarse*.

In the position paper, the author says that when teenagers interact over Facebook instead of in person, they miss out on building in-person interacting skills. In order for people to get good at interacting in person, they have to practice.

Look at the picture. A group of teenagers are interacting in person. They are talking and laughing with each other. Look at the other picture. Is the young man interacting with someone? Explain how you know.

Partner talk: What is your favorite way to interact with your friends?

Student Glossary						
Word Translation	Rewrite the Word	English Definition	Example From Text	Picture or Phrase	Is It a Cognate?	

access acceso	or power to use	for someone with limited access to his or her prefrontal	The older students have access to the computers at school.	yes
adolescente adolescente	C	an adolescent brain has a developing prefrontal cortex		

Engaging in Scaffolded Close Reading (AIR New Activity 5 for Examining a Model Position Paper)

AIR Additional Supports

- Create guiding questions and supplementary questions for each section of text.
- Use sentence frames and word banks for entering and emerging level ELLs/MLLs. Use sentence starters for transitioning ELLs/MLLs.
- Follow the routine below to help ELLs/MLLs comprehend the passage.

AIR Instructions for Teachers

- In this first close reading, students answer questions about the key ideas and details in the text. During this reading, students use their glossary to help with word meanings.
- For each section, the teacher introduces the guiding question(s). Students then work with a partner to answer the supplementary questions.
- After answering each question, students should put the answer into their own words. The teacher reviews the answers with the class. The teacher discusses the guiding question(s) with the class, and the students respond to the guiding question(s) in writing. Students with lower levels of English proficiency can be given sentence frames with more or less framing. Below is an example of a highly scaffolded answer frame for the guiding question.
- After students answer the guiding question(s), they should work with a partner to put the answer into their own words.

Additional close reading examples for each paragraph are provided in Appendix B.

AIR Instructions for Students

Listen to your teacher read the guiding question and think about it as you answer the supplementary questions with a partner. Your teacher will review the supplementary questions with the class and then ask you to answer the guiding question. Look up underlined words in your glossary.

Part 1

Guiding Question

• Facebook currently has a policy that children under 13 should not have a Facebook account. What does the committee have to decide?

Text	Glossary	
You are part of the Children and Media Expert Advisory Committee. Your job is to help the American Academy of Pediatrics decide whether or not to make an official endorsement of Facebook's current policy that children must be 13 in order to get a Facebook account. After examining both the	media—sources of information, like television or newspapers American Academy of Pediatrics—an organization, or group, that cares for the health of children and teenagers whether—if official endorsement—formal or public support for something current—happening right now	
is to help the American Academy of Pediatrics decide whether or not to make an official endorsement of Facebook's current policy that children must be 13 in order to get a Facebook	that cares for the health of children and teenagers whether—if official endorsement—formal or public support for something	

potential benefits and risks of a Facebook account, particularly to the development of the adolescent brain, make a recommendation. Should the American Academy of Pediatrics officially recommend that Facebook raise its minimum age to 18 or endorse the policy as it stands at the age of 13?

Part 5

Guiding Question

• What is the third claim that the author makes? What evidence, or reasons, does the author give to support this claim?

Text	Glossary
The third reason that the AAP should recommend that Facebook raise its minimum age has to do with synaptic pruning. The adolescent brain is in a dynamic stage of development. It is <u>pruning unnecessary synapses</u> and <u>cementing</u> other neurological <u>pathways</u> ("Teens and Decision Making"). A large part of our brain is dedicated to reading <u>social cues</u> because this skill is	prune—cut something away that you don't need unnecessary—something that is not needed synapse—point where messages are sent between brain cells

very important to leading a successful life (Giedd). However, this skill is not automatic. A teenage brain needs time and practice to build these pathways. There are many social skills that cannot be learned online because they are very subtle and require physical proximity (Giedd). These are such things as reading body language, facial expressions, or tone of voice. If someone is spending many hours a day interacting with others on Facebook, then he or she is missing out on an opportunity to build in-person skills. As Facebook becomes more and more popular, teens may use it as a substitute for in-person socializing and spend less time together. If they do that, then they will be pruning very important synapses that are necessary for human interacting. If the age limit for Facebook is raised, then teenagers will be more likely to find a social outlet that nourishes that part of the brain.

cement—make something permanent, or last forever pathway—a route social cue—a signal to be friendly with other people automatic—something that works by itself require—need physical proximity—close to something else interact—respond to someone miss out—not take part in something opportunity—a chance substitute—something that takes the place of something else

[For Teacher Reference]

Instructions: Use this Main Idea/Claim note catcher to get the gist when you read the model position paper. First, fill in the author's *claim*. Then, identify the ways in which the author *supports* their claim. Finally, fill in the *evidence* the author provides for the supports. Finally, analyze whether the *supports* and *evidence* are adequate.

Claim: <u>Facebook</u> can be toxic to a developing teen <u>brain</u>, so <u>Facebook</u> should raise its <u>minimum</u> age to <u>18</u>.

hint: paragraph 1

Evidence /Reasoning

Teenagers are more impulsive and might make foolish decisions online.]

Hint: paragraph 2

Evidence

The prefrontal cortex is important for controlling impulses. A teenager's prefrontal cortex is less developed.

Evidence /Reasoning

Teenagers are more <u>prone</u> to becoming <u>addicted</u> to Facebook.

Hint: paragraph 3

Evidence

The limbic system contributes to <u>addiction</u>. It is more active in teenagers. Facebook <u>stimulates</u> the limbic system.

Evidence /Reasoning

Facebook decreases teenagers' <u>social</u> skills, because they don't <u>interact</u> face-to-face.

Hint: paragraph 4

Evidence

<u>Developing</u> brains cement neurological <u>pathways</u>. Teenagers need to practice face-to-face <u>interaction</u> to cement their <u>social</u> skills.

B. Analyze the Model Paper Using the Argument Rubric

Expeditionary Learning Teacher and Student Actions

Teacher displays the first two rows of the *Expository Writing Evaluation Rubric* and reads the bullet in the first row out loud as students read along silently. Teacher explains that the position paper they read exemplifies the first row with a clear position statement. Teacher explains what "follows logically" means. Teacher reads the bullet in the second row out loud as students read along silently. Students turn and talk about the term "insightful analysis," and teacher cold-calls some students to share. Students discuss whether the claims and reasons they chose on their planner are evidence of insightful analysis. Teacher reads the bullet in the third row out loud as students read along silently. Students read through the model to find a counterclaim acknowledged, discuss with a partner, and share. Students work with a partner to find examples of the bullets in the second row, then share with the whole class.

AIR Additional Supports

- The rubric appears to have been developed primarily for teachers. Provide students with a version that has student-friendly language.
- The rubric also could be translated into students' home language. [EN, EM]

Example: The following is an example of student-friendly language for the first row of the *Expository Writing Evaluation Rubric*, "Claims and Reasons: the extent to which the essay conveys complex ideas and information clearly and accurately in order to logically support the author's argument."

	4	3	2	1	0
Original	clearly introduces the	clearly	introduces the	introduces the	claim and
version	topic and the claim in a	introduces	topic and the	topic and the	reasons
	manner that is compelling	the topic and	claim in a	claim in a	demonstrate a

	the task and purpose	manner that	follows	does not	comprehension
		follows from	generally from	logically follow	

		the task and purpose	the task and purpose	from the task and purpose	of the topic or task
Student version	My topic (main subject or point) is compelling (interesting), and it makes sense for the task (work) and purpose (goal). I introduce (begin or start) my claim (thing that I am saying is true) clearly (in a way easy to understand) and in a way that is interesting to the reader. My topic and my claim are logical (make sense).	My topic makes sense (is clear) for the task and purpose. I introduce my claim clearly.	My topic, or main subject, is reasonable (makes sense) for the task and purpose. My claim also is reasonable for the task and purpose.	My topic is not reasonable for the task and purpose. My claim is not reasonable for the task and purpose.	My claim shows that I do not understand (comprehend) the task. My claim and my reasons show that I do not understand the topic, or subject.

3. Closing and Assessment

A. Exit Ticket: What Will Be the Most Difficult Aspect of Writing This Paper?

Expeditionary Learning Teacher and Student Actions

Students complete exit ticket about the most difficult aspect of writing the paper [ALL]. Teacher collects student written responses.

AIR Additional Supports

Provide sentence frames for ELLs/MLLs at the entering and emerging level. Provide sentence starters or sentence frames will less scaffolding for ELLs/MLLs at the transitioning level.

Example:

The most difficult aspect, or part of writing this paper was will be

. [EN, EM]

The most difficult aspect of writing this paper will be ____

AIR Instructions for Teachers

- Instruct students to complete the sentence frame.
- Collect their responses.

AIR Instructions for Students

Think about what will be the most difficult part of writing this paper. Complete the sentence.

B. Review Homework

Expeditionary Learning Teacher and Student Actions

Teacher distributes the Researcher's Notebook and tells students that their homework is to identify three reasons they will use in their position paper. They have a number of graphic organizers to choose from to help them.

AIR Additional Supports

Make sure that ELLs/MLLs are familiar with the graphic organizers and with the vocabulary therein. The previous activities will help support ELLs/MLLs, because they clarify the content of the lesson. Example: N/A

AIR Instructions for Teachers

- Distribute the Researcher's Notebook.
- Ask students to use the graphic organizers to identify the three reasons they will use in their paper.

AIR Instructions for Students

Complete the graphic organizer to write the three reasons you will use in your paper.

4. Homework

A. Homework

Expeditionary Learning Teacher and Student Actions

Students look through their research and identify reasons they will address in their position paper. Students reread the model position paper and underline information about the brain.

AIR Additional Supports

Make sure ELLs/MLLs had sufficient scaffolding during Unit 1 to have a good understanding of adolescent brain development. In Unit 1, students read various texts that built their background knowledge about adolescent brain development.

Example: N/A

AIR Instructions for Teachers

- Ask students to read through their research and identify the stance they will take in their position paper.
- Have the students reread the model position paper and underline the information about the brain.

Teacher Assessment

Assessment Questions for Grade 7, "Facebook: Not for Kids"

Instructions

Today you or I will read (re-read) an essay which argues that the American Academy of Pediatrics should recommend that Facebook raise its minimum age to 18. You will then answer ten questions. The first question in each pair asks you about the passage (story). The second question asks you what details (information) in the story best supports your answer (helps you answer the first question in the pair). Circle the correct answer to each question.

In many ways Allison is a normal teenager, except for one. She's an exceptional texter. In fact, she quite routinely sends over 900 texts a day. Even though Allison's texting habit may be extreme, her impulse to connect to her peers is not. Teenagers are social. Whether it is due to the evolutionary imperative to find a mate or because they are naturally starting to separate from their parents, teenagers seek out other teens. With the advent of Facebook, this social impulse can be followed any time of the day. However, because an adolescent brain has a developing prefrontal cortex, a highly sensitive risk and reward center, and is entering a period of dynamic growth, Facebook can be a particularly toxic when paired with the developing teen brain. For these reasons, the American Academy of Pediatrics should recommend that Facebook raise its minimum age to 18 so teens are on steadier neurological footing before they begin to navigate the social world of Facebook.

Facebook is not a Web site for someone with limited access to his or her prefrontal cortex. The prefrontal cortex develops throughout adolescence and is the part of the brain that helps someone control impulses and make sound judgments (Bernstein). Because a teenager's prefrontal cortex is less developed, he or she is more likely to be impulsive ("Teens and Decision Making"). If teenagers are spending a lot of time on Facebook, then they are more likely to make an impulsive or foolish decision online. This is a problem. In real life the consequences for an impulsive, foolish decision may evaporate quickly, but if a person impulsively does something foolish online then that decision can quickly become permanent. It is very easy to make unwise decisions on Facebook. Things like bullying someone, sharing private information, or posting inappropriate pictures can be done, almost without thinking, especially if one's prefrontal cortex is still developing. Raising the age threshold on Facebook will limit the time teenagers spend on Facebook and will lower their risk of making a foolish decision online.

Perhaps due to the fact that the prefrontal cortex isn't fully available, teenagers rely more on their limbic system, which is more developed, to make decisions ("Teens and Decision Making"). The limbic system is the emotional center of the brain and is also called the "risk and reward" system (Bernstein). This means that it is the part of the brain that is activated

when one does something risky or pleasurable. When a part of the brain, like the limbic system, is "activated," it is awash with neurotransmitters, like dopamine. Dopamine is the main neurotransmitter of the reward system and all addictive substances and addictive behavior increase dopamine in the brain (Giedd). This is important because, compared to adults, teens are highly sensitive to dopamine in their limbic system (Galván). This extra sensitivity and excitability makes them more prone to addiction (Knox). Therefore it seems logical that they may be more prone to becoming addicted to substances or activities that stimulate dopamine. Logging on to Facebook increases the dopamine levels in a person's brain (Ritvo). If teenagers are more prone to addiction and more sensitive to the dopamine released by logging into Facebook, then they may be more vulnerable to becoming "addicted" to Facebook. While this may seem like a harmless pastime, for a teenager, it can be very distracting and debilitating. If the age limit is raised, then teens are less likely to fall prey to this addiction.

The third reason that the AAP should recommend that Facebook raise its minimum age has to do with synaptic pruning. The adolescent brain is in a dynamic stage of development. It is pruning unnecessary synapses and cementing other neurological pathways ("Teens and Decision Making"). A large part of our brain is dedicated to reading social cues because this skill is very important to leading a successful life (Giedd). However, this skill is not automatic. A teenage brain needs time and practice to build these pathways. There are many social skills that cannot be learned online because they are very subtle and require physical proximity (Giedd). These are such things as reading body language, facial expressions, or tone of voice. If someone is spending many hours a day interacting with others on Facebook, then he or she is missing out on an opportunity to build in-person skills. As Facebook becomes more and more popular, teens may use it as a substitute for in-person socializing and spend less time together. If they do that, then they will be pruning very important synapses that are necessary for human interacting. If the age limit for Facebook is raised, then teenagers will be more likely to find a social outlet that nourishes that part of the brain.

Facebook is an extremely popular Web site. Nearly one in eight people on the planet have a Facebook account (Giedd). It is lively and evolving part of modern society. However, there are many potential pitfalls on Facebook to the developing teen brain, including addiction, impulsive decision-making, and the missed opportunity to build strong social skills. By recommending that teenagers wait until they are 18 to have an account, the AAP will mitigate these hazards by giving the adolescent brain time to develop further. The prosocial benefits of Facebook will be there when the teen can more wisely and effectively access them.

Part A

According to paragraph 2 of "Facebook: Not for Kids," what is the role or job of the prefrontal cortex?

- A. It is the risk and reward center
- B. It is responsible for regulating breathing
- C. It encourages compulsive behavior
- D. It manages desires and guides choices

Part B

What evidence from "Facebook: Not for Kids" best supports the answer to Part A?

A. "... [it] is the part of the brain that helps someone control impulses and make sound judgments."

- B. "... an adolescent brain has a developing prefrontal cortex, a highly sensitive risk and reward center, and is entering a period of dynamic growth..."
- C. "This extra sensitivity and excitability makes them more prone to addiction..."
- D. "This means that it is the part of the brain that is activated when one does something risky or pleasurable."

Ouestion 2

Part A

What is the meaning of the word "impulsive" as it is used in paragraph 1 of "Facebook: Not for Kids"?

A. Act without thinking

- B. Dig into the ground
- C. Disappear or go away
- D. Turn a different color

Part B

What evidence from "Facebook: Not for Kids" supports the correct answer in Part A?

- A. "he or she is more likely to be impulsive"
- B. "that decision can quickly become permanent"
- C. "It is very easy to make unwise decisions on Facebook"
- D. "lower their risk of making a foolish decision online"

Part A

What happens when the limbic system starts working according to "Facebook: Not for Kids"?

- A. Children are less likely to perform risky actions
- **B.** The amount of dopamine in the brain increases
- C. People are able to break addictions they might have
- D. The urge to eat is in conflict with the desire to sleep

Part B

Which of the following sentences supports the answer to Part A?

- A. "The limbic system is the emotional center of the brain and is also called the 'risk and reward' system."
- B. "When a part of the brain, like the limbic system, is 'activated,' it is awash with neurotransmitters, like dopamine."
- C. "Therefore it seems logical that they may be more prone to becoming addicted to substances or activities that stimulate dopamine."
- D. "While this may seem like a harmless pastime, for a teenager, it can be very distracting and debilitating."

Part A

In paragraph 4 of the "Facebook: Not for Kids," what two things does the author say is happening to the adolescent brain?

- A. Practicing social skills and reading body language
- B. Learning language and understanding social cues
- C. Developing the prefrontal cortex and refining the limbic system
- D. Destroying as well as creating routes in the brain

Part B

Which two pieces of evidence support the answer to Part A?

- A. "[The adolescent brain] is pruning unnecessary synapses and cementing other neurological pathways."
- **B.** "A large part of our brain is dedicated to reading social cues because this skill is very important to leading a successful life."
- C. "A teenage brain needs time and practice to build these pathways."
- D. "There are many social skills that cannot be learned online because they are very subtle and require physical proximity."
- E. "teens may use it as a substitute for in-person socializing and spend less time together."
- F. "teenagers will be more likely to find a social outlet that nourishes that part of the brain."

Part A

According to the author of "Facebook: Not for Kids," what are the main pitfalls of using Facebook for teenagers?

- A. Loss of appetite, sleeplessness, and weight gain leading to health problems
- B. Acting without thinking, using Facebook too much, and not learning about other people's emotions or feelings.
- C. Dopamine dependence, synaptic pruning, and prefrontal cortex development
- D. The inability to learn key mathematical and language skills

Part B

Which evidence from "Facebook: Not for Kids" supports the correct answer in Part A?

- A. "there are many potential pitfalls on Facebook..., including addiction, impulsive decision-making, and the missed opportunity to build strong social skills."
- B. "... because an adolescent brain... is entering a period of dynamic growth, Facebook can be a particularly toxic when paired with the developing teen brain."
- C. "Facebook is an extremely popular Web site. Nearly one in eight people on the planet have a Facebook account."
- D. "The prosocial benefits of Facebook will be there when the teen can more wisely and effectively access them."

Writing Task

The American Academy of Pediatrics recommends that children younger than 18 do not use Facebook. Write a paragraph explaining the reasons the writer gives for this recommendation. Use specific details from the article to support your answer

Sample Response

The author of the article argues that the American Academy of Pediatrics should recommend that Facebook raise its minimum age to 18 because adolescent brains have not fully developed. As a result, younger users are exposed to three dangers. The first concern is that adolescents are more likely to make "impulsive" decisions online. This is due to a "developing prefrontal cortex." This part of the brain controls desires and decision making. The second point they make is that because the prefrontal cortex is not developed, teenagers use the limbic system instead when making choices. This increases dopamine in the brain, which can lead to them "becoming addicted to Facebook." The last reason they give is that being on-line reduces the number of face-to-face interactions between young people. Without these interactions, they may not learn how to read "social cues." Because of these risks, the author believes that Facebook should be restricted to adults whose brains have fully developed.

Explanatory Writing Rubric Grade 7

Criteria for Explanatory Writing	Meeting (3) Student achieves all of the "Meeting" criteria	Developing (2) Student work does not achieve some of the "Meeting" criteria	Emerging (1) Student work does not achieve most of the "Meeting" criteria
Development and Elaboration			
Topic: Introduces a topic clearly, previewing what is to follow to examine and convey ideas, concepts, and information (W.7.2a)	Credible topic	Unclear topic	No topic
Evidence: Develops the topic with relevant facts, definitions, concrete details, quotations, or other information and examples (W.7.2b)	Cites relevant evidence	Unclear or vague evidence	No or inaccurate evidence
Organization and Focus			
Introduction: Provides an introduction that frames the topic clearly in a thesis statement and provides focus for what is to follow (W.7.2)	Well-developed introduction	Underdeveloped or ineffective introduction	No recognizable introduction
Conclusions: Provides a concluding statement or section that follows from and supports the information or explanation presented (W.7.2f)	Well-developed conclusion	Underdeveloped or ineffective conclusion	No recognizable conclusion
Language and Clarity			
Vocabulary: Uses precise language and domain-specific vocabulary to inform about or explain the topic (W.7.2d)	Clear use of precise language and vocabulary	Ineffective use of language and vocabulary	Use of unclear language and poor vocabulary
Transitions: Uses appropriate transitions to create cohesion and clarify the relationships among ideas and concepts (W.7.2c)	Sufficient transitions	Occasional transitions	Little or no transitions
Conventions			
Conventions: Demonstrates a command of grade appropriate grammatical English and mechanical conventions (L.7.1-2)	Few distracting errors	Several errors	Numerous errors

Facebook: Not for Kids

Instructions: Today you or your teacher will read (re-read) an essay which argues that the American Academy of Pediatrics should recommend that Facebook raise its minimum age to 18. You will then answer ten questions. The first question in each pair asks you about the passage (story). The second question asks you what details (information) in the story best supports your answer (helps you answer the first question in the pair). Circle the correct answer to each question.

In many ways Allison is a normal teenager, except for one. She's an exceptional texter. In fact, she quite routinely sends over 900 texts a day. Even though Allison's texting habit may be extreme, her impulse to connect to her peers is not. Teenagers are social. Whether it is due to the evolutionary imperative to find a mate or because they are naturally starting to separate from their parents, teenagers seek out other teens. With the advent of Facebook, this social impulse can be followed any time of the day. However, because an adolescent brain has a developing prefrontal cortex, a highly sensitive risk and reward center, and is entering a period of dynamic growth, Facebook can be a particularly toxic when paired with the developing teen brain. For these reasons, the American Academy of Pediatrics should recommend that Facebook raise its minimum age to 18 so teens are on steadier neurological footing before they begin to navigate the social world of Facebook.

Facebook is not a Web site for someone with limited access to his or her prefrontal cortex. The prefrontal cortex develops throughout adolescence and is the part of the brain that helps someone control impulses and make sound judgments (Bernstein). Because a teenager's prefrontal cortex is less developed, he or she is more likely to be impulsive ("Teens and Decision Making"). If teenagers are spending a lot of time on Facebook, then they are more likely to make an impulsive or foolish decision online. This is a problem. In real life the consequences for an impulsive, foolish decision may evaporate quickly, but if a person impulsively does something foolish online then that decision can quickly become permanent. It is very easy to make unwise decisions on Facebook. Things like bullying someone, sharing private information, or posting inappropriate pictures can be done, almost without thinking, especially if one's prefrontal cortex is still developing. Raising the age threshold on Facebook will limit the time teenagers spend on Facebook and will lower their risk of making a foolish decision online.

Perhaps due to the fact that the prefrontal cortex isn't fully available, teenagers rely more on their limbic system, which is more developed, to make decisions ("Teens and Decision

Making"). The limbic system is the emotional center of the brain and is also called the "risk and reward" system (Bernstein). This means that it is the part of the brain that is activated when one does something risky or pleasurable. When a part of the brain, like the limbic system, is "activated," it is awash with neurotransmitters, like dopamine. Dopamine is the main neurotransmitter of the reward system and all addictive substances and addictive behavior increase dopamine in the brain (Giedd). This is important because, compared to adults, teens are highly sensitive to dopamine in their limbic system (Galván). This extra sensitivity and excitability makes them more prone to addiction (Knox). Therefore it seems logical that they may be more prone to becoming addicted to substances or activities that stimulate dopamine. Logging on to Facebook increases the dopamine levels in a person's brain (Ritvo). If teenagers are more prone to addiction and more sensitive to the dopamine released by logging into Facebook, then they may be more vulnerable to becoming "addicted" to Facebook. While this may seem like a harmless pastime, for a teenager, it can be very distracting and debilitating. If the age limit is raised, then teens are less likely to fall prey to this addiction.

The third reason that the AAP should recommend that Facebook raise its minimum age has to do with synaptic pruning. The adolescent brain is in a dynamic stage of development. It is pruning unnecessary synapses and cementing other neurological pathways ("Teens and Decision Making"). A large part of our brain is dedicated to reading social cues because this skill is very important to leading a successful life (Giedd). However, this skill is not automatic. A teenage brain needs time and practice to build these pathways. There are many social skills that cannot be learned online because they are very subtle and require physical proximity (Giedd). These are such things as reading body language, facial expressions, or tone of voice. If someone is spending many hours a day interacting with others on Facebook, then he or she is missing out on an opportunity to build in-person skills. As Facebook becomes more and more popular, teens may use it as a substitute for in-person socializing and spend less time together. If they do that, then they will be pruning very important synapses that are necessary for human interacting. If the age limit for Facebook is raised, then teenagers will be more likely to find a social outlet that nourishes that part of the brain.

Facebook is an extremely popular Web site. Nearly one in eight people on the planet have a Facebook account (Giedd). It is lively and evolving part of modern society. However, there are many potential pitfalls on Facebook to the developing teen brain, including addiction, impulsive decision-making, and the missed opportunity to build strong social skills. By recommending that teenagers wait until they are 18 to have an account, the AAP will mitigate these hazards by giving the adolescent brain time to develop further. The prosocial benefits of Facebook will be there when the teen can more wisely and effectively access them.

Part A

According to paragraph 2 of "Facebook: Not for Kids," what is the role or job of the prefrontal cortex?

- E. It is the risk and reward center
- F. It is responsible for regulating breathing
- G. It encourages compulsive behavior
- H. It manages desires and guides choices

Part B

What evidence from "Facebook: Not for Kids" best supports the answer to Part A?

- E. "... [it] is the part of the brain that helps someone control impulses and make sound judgments."
- F. "... an adolescent brain has a developing prefrontal cortex, a highly sensitive risk and reward center, and is entering a period of dynamic growth..."
- G. "This extra sensitivity and excitability makes them more prone to addiction..."
- H. "This means that it is the part of the brain that is activated when one does something risky or pleasurable."

Question 2

Part A

What is the meaning of the word "impulsive" as it is used in paragraph 1 of "Facebook: Not for Kids"?

- E. Act without thinking
- F. Dig into the ground
- G. Disappear or go away
- H. Turn a different color

Part B

What evidence from "Facebook: Not for Kids" supports the correct answer in Part A?

- E. "he or she is more likely to be impulsive"
- F. "that decision can quickly become permanent"
- G. "It is very easy to make unwise decisions on Facebook"

H. "lower their risk of making a foolish decision online"

Question 3

Part A

- E. Children are less likely to perform risky actions
- F. The amount of dopamine in the brain increases
- G. People are able to break addictions they might have
- H. The urge to eat is in conflict with the desire to sleep

Part B

Which of the following sentences supports the answer to Part A?

- E. "The limbic system is the emotional center of the brain and is also called the 'risk and reward' system."
- F. "When a part of the brain, like the limbic system, is 'activated,' it is awash with neurotransmitters, like dopamine."
- G. "Therefore it seems logical that they may be more prone to becoming addicted to substances or activities that stimulate dopamine."
- H. "While this may seem like a harmless pastime, for a teenager, it can be very distracting and debilitating."

Part A

In paragraph 4 of the "Facebook: Not for Kids," what two things does the author say is happening to the adolescent brain?

- E. Practicing social skills and reading body language
- F. Learning language and understanding social cues
- G. Developing the prefrontal cortex and refining the limbic system
- H. Destroying as well as creating routes in the brain

Part B

Which two pieces of evidence support the answer to Part A?

- G. "[The adolescent brain] is pruning unnecessary synapses and cementing other neurological pathways."
- H. "A large part of our brain is dedicated to reading social cues because this skill is very important to leading a successful life."
- I. "A teenage brain needs time and practice to build these pathways."
- J. "There are many social skills that cannot be learned online because they are very subtle and require physical proximity."
- K. "teens may use it as a substitute for in-person socializing and spend less time together."
- L. "teenagers will be more likely to find a social outlet that nourishes that part of the brain."

Part A

According to the author of "Facebook: Not for Kids," what are the main pitfalls of using Facebook for teenagers?

- E. Loss of appetite, sleeplessness, and weight gain leading to health problems
- F. Acting without thinking, using Facebook too much, and not learning about other people's emotions or feelings.
- G. Dopamine dependence, synaptic pruning, and prefrontal cortex development
- H. The inability to learn key mathematical and language skills

Part B

Which evidence from "Facebook: Not for Kids" supports the correct answer in Part A?

- E. "there are many potential pitfalls on Facebook..., including addiction, impulsive decision-making, and the missed opportunity to build strong social skills."
- F. "... because an adolescent brain... is entering a period of dynamic growth, Facebook can be a particularly toxic when paired with the developing teen brain."
- G. "Facebook is an extremely popular Web site. Nearly one in eight people on the planet have a Facebook account."
- H. "The prosocial benefits of Facebook will be there when the teen can more wisely and effectively access them."

Instructions: The American Academy of Pediatrics recommends that children younger than 18 do not use Facebook. Write a paragraph explaining the reasons the writer gives for this recommendation. Use specific details from the article to support your answer.
